

Subject card

Subject name and code	Aspects of robotics in artificial intelligence, PG_00053335						
Field of study	Biomedical Engineering, Biomedical Engineering, Biomedical Engineering						
Date of commencement of studies	February 2024	Academic year of realisation of subject			2023/2024		
Education level	second-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	1	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Biomedical Engineering -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Grzegorz Jasiński				
	Teachers		dr inż. Grzegorz Jasiński				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		5.0		40.0	75
Subject objectives	The aim of the course is to familiarize students with issues from the border of robotics and artificial intelligence. Both hardware aspects and issues related to their practical use will be presented. Typical algorithmic and hardware solutions will be discussed. Typical solutions of robotic systems carrying out typical tasks will be shown.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_U09] can carry out a critical analysis of the functioning of existing technical solutions and assess these solutions, as well as apply experience related to the maintenance of advanced technical systems, devices and facilities typical for the field of studies, gained in the professional engineering environment	Student dobiera zależnie od aplikacji rozwiązania wykorzystywane w budowie systemów robotycznych. Student testuje działanie wybranych rozwiązań sprzętowych i algorytmicznych. Student buduje i konfiguruje wybrane systemy robotyczne realizujące typowe zadania. Student tworzy oprogramowanie sterujące pracą robotów.	[SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information
	[K7_K02] is ready to provide critical evaluation of received content and to acknowledge the importance of knowledge in solving cognitive and practical problems	The student explains the basic differences between the various hardware solutions. The student analyzes the operation of selected algorithms used to carry out typical tasks in robotics.	[SK5] Assessment of ability to solve problems that arise in practice [SK3] Assessment of ability to organize work
	[K7_K03] is ready to meet social obligations, inspire and organise activities for the social environment, initiate actions for the public interest, think and act in an entrepreneurial way	The student explains the meaning of the basic concepts related to robotics. The student indicates and explains the basic conditions for the design and use of robotic systems using artificial intelligence algorithms.	[SK5] Assessment of ability to solve problems that arise in practice
	[K7_W05] Knows and understands, to an increased extent, methods of process and function support, specific to the field of study.	The student explains the meaning of the basic concepts related to robotics and artificial intelligence. The student explains the basic differences between the various hardware solutions. The student analyzes the operation of selected algorithms used to carry out typical tasks in robotics.	[SW2] Assessment of knowledge contained in presentation [SW1] Assessment of factual knowledge
Subject contents	Introduction to Robotics. Sensors and sensor networks. Signal processing from sensors, artificial intelligence techniques for sensors. Video tracking of objects, classification of objects. Localization of autonomous mobile robots. Creating on-line maps with the use of autonomous mobile robots. Sensor-assisted collision avoidance systems. Map representations, navigation (position and course estimation). Electronic systems of robotic platforms. Examples of robotic platforms. Programming robots. Programming the robot's sensors. Programming motors and servos. Autonomous robots. An example of robotic solutions related to biomedical engineering.		
Prerequisites and co-requisites	There are no requirements		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	written exam	50.0%	70.0%
	laboratory	50.0%	30.0%
