

Subject card

Subject name and code	Modelling of hydraulic systems, PG_00059393						
Field of study	Mechanical Engineering						
Date of commencement of studies	February 2024	Academic year of realisation of subject			2024/2025		
Education level	second-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Part-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Mechanics and Mechatronics -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Paweł Śliwiński					
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	9.0	0.0	9.0	9.0	0.0	27
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	27		6.0		42.0	75
Subject objectives	Learning about modeling of hydraulic systems						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K7_W05] possesses profound knowledge on the operation of complex systems and mechanical devices, including process equipment	The student will be able to analyze in depth the phenomena in a complex hydraulic system.			[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects		
	[K7_W08] possesses widened knowledge within the range of design methods of hydraulic systems, heating and fluid-flow machines and transport devices	The student can design a basic hydraulic system with at least two motors.			[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects		
	[K7_U05] is able to plan and conduct the experimental research determining the parameters of a device or system, assesses the usability and correctly selects methods and tools, is able to interpret the results and estimate the measurement errors and is able to apply computer systems to simulate the operation of a machine or technology	The student can make measurements in complex hydraulic systems of machines and analyze the results of these measurements.			[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject [SU5] Assessment of ability to present the results of task		

Subject contents	<p>1. Energy efficiency of the hydraulic system.</p> <p>2. Circuits with power recuperation.</p> <p>3. Proportional valves and their selection for the hydraulic system.</p> <p>4. Servovalve and its selection for the hydraulic system.</p> <p>5. Load Sensing systems.</p>		
Prerequisites and co-requisites	Knowledge of the basics of hydraulics from the first cycle studies.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Laboratory exercise and project	56.0%	25.0%
	Written exam	56.0%	75.0%
Recommended reading	Basic literature	<p>1. A. Osiecki, Hydrostatic drive of machines, WNT, Warszawa 1998.</p> <p>2. Z. Szydelski, Drive and hydraulic control, WKŁ Warszawa 1999.</p> <p>3. S. Stryczek, Hydrostatic drive, PWN Warszawa 1990.</p> <p>4. A. Pizoń, Hydrauliczne i elektrohydrauliczne układy sterowania i regulacji. WNT, W-wa 1987.</p> <p>5. Vademecum Rexroth.</p>
