

Subject card

Subject name and code		Finite element method, PG_00057399						
Field of study		Mechanical Engineering						
Date of commencement of studies		February 2024		Academic year of realisation of subject		2024/2025		
Education level		second-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study		
Mode of study		Full-time studies		Mode of delivery		at the university		
Year of study		1		Language of instruction		Polish		
Semester of study		2		ECTS credits		4.0		
Learning profile		general academic profile		Assessment form		assessment		
Conducting unit		Zakład Mechaniki Stosowanej i Biomechaniki -> Institute of Mechanics and Machine Design -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)		Subject supervisor		prof. dr hab. inż. Marek Krawczuk				
		Teachers						
Lesson types and methods of instruction		Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
		Number of study hours	30.0	0.0	0.0	30.0	0.0	60
		E-learning hours included: 0.0						
Learning activity and number of study hours		Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
		Number of study hours	60		8.0		32.0	100
Subject objectives		Presentation of the theoretical basis of the Finite Element Method. Understanding the basics of the method will enable students to consciously use the commercial software of the method, without treating it as a black box.						
Learning outcomes		Course outcome		Subject outcome		Method of verification		
		[K7_W02] possesses a wide and profound knowledge on continuum mechanics and materials strength within the range of modelling and simulating multi-function mechanical systems		The student knows the basics of numerical modeling of construction in accordance with MES procedures		[SW3] Assessment of knowledge contained in written work and projects		
		[K7_W01] possesses a profound mathematical knowledge useful in the analysis and description of the operation of complex mechanical systems, technological processes and operating properties of machines and devices; is familiar with the main development trends		The student knows the basics of numerical methods used in MES.		[SW1] Assessment of factual knowledge		
		[K7_U05] is able to plan and conduct the experimental research determining the parameters of a device or system, assesses the usability and correctly selects methods and tools, is able to interpret the results and estimate the measurement errors and is able to apply computer systems to simulate the operation of a machine or technology		84 / 5 000 Wyniki tłumaczenia The student is able to plan and implement a numerical experiment with the use of FEM		[SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools		

Subject contents	<p>Lecture: Fundamentals of FEM, methods of discretization, the concept of a finite element. Shape function, ways of creating shape functions. Approximation of deformation and stress fields in FEM. Derivation of the characteristic matrices of a finite element. Examples of the structure of matrices characteristic for one-, two- and three-dimensional elements. Derivation of the equations of motion of a discretized body FEM. Creating global matrices in FEM. Modeling of boundary conditions, mechanical properties of the construction material, loading method. Solving equations of motion in FEM. Accuracy of the method. Linear and nonlinear analysis of statics and dynamics. Commercial software. Project: Development of own FEM program to solve the problems of statics and dynamics of one-dimensional structures, with particular emphasis on the impact of the assumptions (type of theory, element type, boundary conditions model, material model, load model) on the accuracy of the obtained results.</p>											
Prerequisites and co-requisites	The student has theoretical and practical skills in technical mechanics, strength of materials and the basics of programming.											
Assessment methods and criteria	<table border="1" data-bbox="448 593 1497 696"> <thead> <tr> <th data-bbox="448 593 798 629">Subject passing criteria</th> <th data-bbox="801 593 1139 629">Passing threshold</th> <th data-bbox="1142 593 1497 629">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="448 633 798 663">Test of theoretical knowledge</td> <td data-bbox="801 633 1139 663">60.0%</td> <td data-bbox="1142 633 1497 663">50.0%</td> </tr> <tr> <td data-bbox="448 667 798 696">Project</td> <td data-bbox="801 667 1139 696">100.0%</td> <td data-bbox="1142 667 1497 696">50.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	Test of theoretical knowledge	60.0%	50.0%	Project	100.0%	50.0%
Subject passing criteria	Passing threshold	Percentage of the final grade										
Test of theoretical knowledge	60.0%	50.0%										
Project	100.0%	50.0%
