Learning activity		asses included in study		Participation in consultation hours		tudy	SUM
Number of study hours	30	6.0		14.0		50	
The subject aims to familiarize students with the idea of experimental work, from planning the experiment, through the acquisition and interpretation of measurement data, to drawing conclusions based on them. In addition, the subject aims to familiarize students with the importance of measurement uncertainty in experimental research as well as to show good practices in conducting experimental work. This subject will teach the student how to plan and run an experiment, and how to interpret the data and compare it with scientific theories, taking into account measurement uncertainty.							
Course outcome		Subject outcome		Method of verification			
knowledge on the diagnostics and monitoring of the condition of devices, assemblies and technical systems, as well as measurement methods of process and operation		The ability to design and carry out experimental work based on measurements of physical quantities and their curation, enabling diagnostics and monitoring of the machines and devices operation			[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects		
conduct the experimental research determining the parameters of a device or system, assesses the usability and correctly selects methods and tools, is able to interpret the results and estimate the measurement errors and is able to apply computer systems to simulate the operation of a machine or technology [K7_W01] possesses a profound mathematical knowledge useful in the analysis and description of the operation of complex mechanical systems, technological processes and operating properties of		The ability to design an experiment in the field of machinery and equipment or technology and theoretical results elaboration, using a variety of techniques and tools, including the calculation of measurement uncertainty The ability to experimental data curation using mathematical and statistical analysis			[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information [SU4] Assessment of ability to use methods and tools [SW1] Assessment of factual knowledge [SW2] Assessment of knowledge contained in presentation		
	February 2024 second-cycle studies Full-time studies 1 general academic productive of Energy -> Subject supervisor Teachers Lesson type Number of study hours E-learning hours included through the acquisition addition, the subject acceptimental researce teach the student how scientific theories, take Course out [K7_W07] possesses knowledge on the diamonitoring of the cordevices, assemblies systems, as well as methods of process control [K7_U05] is able to product the experimental research the student how scientific theories, take the measurement enable to apply compute simulate the operation machine or technological interpret the results at the measurement enable to apply compute simulate the operation and tools, is interpret the results at the measurement enable to apply compute simulate the operation of complexity and correction and tools, is interpret the results at the measurement enable to apply compute simulate the operation of complexity and operation of	February 2024 second-cycle studies Full-time studies 1 1 general academic profile Institute of Energy -> Faculty of Med Subject supervisor Teachers Lesson type Lecture Number of study hours E-learning hours included: 0.0 Learning activity Participation in classes including plan Number of study hours The subject aims to familiarize stude through the acquisition and interpret addition, the subject aims to familiar experimental research as well as to teach the student how to plan and ruscientific theories, taking into account Course outcome [K7_W07] possesses profound knowledge on the diagnostics and monitoring of the condition of devices, assemblies and technical systems, as well as measurement methods of process and operation control [K7_U05] is able to plan and conduct the experimental research determining the parameters of a device or system, assesses the usability and correctly selects methods and tools, is able to interpret the results and estimate the measurement errors and is able to apply computer systems to simulate the operation of a machine or technology [K7_W01] possesses a profound mathematical knowledge useful in the analysis and description of the operation of complex mechanical systems, technological processes	February 2024 February 2024 Second-cycle studies Full-time studies Full-time studies Full-time studies Full-time studies Full-time Subject contents Prerequisites	1. Basic concepts 2. Experiment in historical and philosophical perspective 3. Examples of simple experiments 4. Basics of experiment design 5. Input, output, control, dependent, and independent variables 6. Qualitative and quantitative measurements 7. Uncertainties and measurement errors 8. Acquisition of measurement data 9. Statistical analysis of measurement data 10. Utilization of measurement data for calculations 11. Numerical methods as an experiment aiding tools 12. Good practices in designing and conducting experimental research 13. Designing and conducting an experiment - a case study Knowledge of basic mathematical concepts with particular emphasis on the concepts of mathematical						
and co-requisites	statistics. Basic knowledge of machine construction, thermal-flow and material strength measurements.						
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade				
and Chiena	Lecture - writing assessment	60.0%	60.0%				
	Tutorial - writing assessment	60.0%	40.0%
