

Subject card

Subject name and code	Fluid flow machinery design, PG_00057393						
Field of study	Mechanical Engineering						
Date of commencement of studies	February 2024	Academic year of realisation of subject			2024/2025		
Education level	second-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			5.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Zakład Maszyn Przepływowych -> Institute of Energy -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Wojciech Włodarski					
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	15.0	0.0	15.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		10.0		55.0	125
Subject objectives	The aim of the course is to broaden the knowledge in the field of design, construction, operation and control of turbomachinery used in the power industry.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K7_W05] possesses profound knowledge on the operation of complex systems and mechanical devices, including process equipment	The student assesses the usefulness and correctly selects the methods and tools best suited to solving engineering tasks typical for the specialization.			[SW1] Assessment of factual knowledge		
	[K7_U07] is able to perform a preliminary economic analysis of the undertaken engineering actions within the range of design, production and operation of machines and technical devices	The student has in-depth knowledge of the operation of complex mechanical systems and devices, including process apparatus.			[SU1] Assessment of task fulfilment		
	[K7_U06] when solving engineering problems on design, technology and operation of machines is able to assess and classify typical methods and tools, define systemic and ex-technical aspects using modern calculating methods and design tools or modifying the current ones	The student assesses the usefulness and correctly selects the methods and tools best suited to solving engineering tasks typical for the specialization.			[SU3] Assessment of ability to use knowledge gained from the subject		
	[K7_W03] possesses a profound knowledge on thermodynamic processes and their simulation, knows simulation methods and programs aiding the design and operation of power generating machines and process equipment, including renewable energy sources, air conditioning and cooling renewable energy sources, air conditioning and cooling	The student is able to describe and evaluate system and non-technical aspects when solving engineering tasks in the field of design, technology and operation of machines.			[SW1] Assessment of factual knowledge		

Subject contents	Classification of turbomachinery devices. Steam turbines, gas turbines, wind turbines, pumps, compressors and fans. The principle of work, construction, design solutions, operation and control of selected types of turbomachinery devices. Strength analysis of rotors. Fundamentals of rotor dynamics. Design of steering and rotor blades and their mountings. Vibration of the blades. Design of journal and thrust bearings. Turbine housings and external glands. The use of numerical methods in the design of turbomachinery devices.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
