

GDAŃSK UNIVERSITY

Subject card

Subject name and code	Power plants with internal combustion engines design, PG_00057394								
Field of study	Mechanical Engineering								
Date of commencement of studies	February 2024		Academic year of realisation of subject			2024/2025			
Education level	second-cycle studies		Subject group			Optional subject group Subject group related to scientific research in the field of study			
Mode of study	Full-time studies		Mode of delivery			at the university			
Year of study	1		Language of instruction			Polish			
Semester of study	2		ECTS credits			3.0			
Learning profile	general academic profile		Assessment form			assessment			
Conducting unit	Zakład Ekoinżynierii i Silników Spalinowych -> Institute of Energy -> Faculty of Mechanical Engineering and Ship Technology						gineering and		
Name and surname	Subject supervisor		dr hab. inż. Jacek Kropiwnicki						
of lecturer (lecturers)	Teachers	eachers							
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project		Seminar	SUM	
	hours	30.0	0.0	0.0	15.0		0.0	45	
	E-learning hours inclu	ided: 0.0							
Learning activity and number of study hours	Learning activity	Participation in classes includ plan	n didactic led in study	Participation in consultation hours		Self-study		SUM	
	Number of study hours	45		6.0		24.0		75	
Subject objectives	The aim of the course is to introduce scientists to the program of designing and commissioning stationary devices with piston engines.								
Learning outcomes	Course outcome		Subject outcome			Method of verification			
	[K7_U07] is able to perform a preliminary economic analysis of the undertaken engineering actions within the range of design, production and operation of machines and technical devices		can select machines and equipment for stationary combustion power plants with intensive use of waste heat from manufacturers' catalogs			[SU1] Assessment of task fulfilment			
	[K7_W05] possesses profound knowledge on the operation of complex systems and mechanical devices, including process equipment		has knowledge of the operation of combined heat and power production systems			[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects			
[K7_W10] possesses knowledge on the methods of technical and economic analysis of industrial systems and optimization of manufacturing systems; is familiar with the general principles of initiating and developing forms of individual entrepreneurship, particularly for innovative projects using the knowledge		can optimize the electricity and heat generation system and add energy accumulation systems.			[SW3] Assessment of knowledge contained in written work and projects				
Subject contents	Construction of high-power combustion engines, Stationary power plants with piston engines, Monitoring of power plant operating parameters, Cogeneration systems - heat recovery - energy accumulation. Combustion power plant installations. Fuel supply systems. Boosting the engines.								
Prerequisites and co-requisites	Thermodynamics Fluid mechanics								
Assessment methods and criteria	Subject passing criteria		Passing threshold			Percentage of the final grade			
	Test		50.0%			60.0%			
	Project		50.0%			40.0%
