

Subject card

Subject name and code	Planning and production control, PG_00059503						
Field of study	Management and Production Engineering						
Date of commencement of studies	February 2024	Academic year of realisation of subject			2024/2025		
Education level	second-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			4.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Institute of Manufacturing and Materials Technology -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Aleksandra Wiśniewska					
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	15.0	0.0	15.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		6.0		34.0	100
Subject objectives	The program of lectures and table and laboratory exercises is to equip the student with advanced knowledge of the application of production management models at the tactical and operational level, from issues related to assortment and quantity planning, through resource planning in conditions of dependent and independent demand, to issues related to maintenance machine park aimed at assessing and improving the efficiency of machines and devices.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_K03] can think and act in a creative and entrepreneurial manner	The student organizes his own and team work, choosing means and methods of team role management, task allocation management and change management. Knows and uses activation methods and tools that foster creativity and innovation.	[SK5] Assessment of ability to solve problems that arise in practice [SK4] Assessment of communication skills, including language correctness [SK3] Assessment of ability to organize work [SK1] Assessment of group work skills
	[K7_U05] is able - in accordance with a given specification, taking into account non-technical aspects - to design a complex device, object, system or process related to the studied engineering discipline, and to implement this project - at least in part - using appropriate methods, techniques and tools, if necessary, adapting to it the purpose of existing or developing new tools	The student is able to design the arrangement of workstations in the production structure of the subject specialization and design the production department using methods and tools commonly used for this purpose and modifications created for non-standard solutions.	[SU1] Assessment of task fulfilment [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools
	[K7_W02] has extended knowledge covering key issues characterizing production processes	The student identifies, selects analytical methods, analyzes, determines relationships, formulates conclusions and recommendations for the management and control of production processes.	[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge
	[K7_U09] is able to define the directions of further learning and implement the process of self-education	The student is able to analyze the effectiveness of the methods of solving problems chosen by him/her. Is able to identify shortages of knowledge, skills and experience, and then set development directions based on the principles of continuous improvement.	[SU3] Assessment of ability to use knowledge gained from the subject [SU5] Assessment of ability to present the results of task [SU4] Assessment of ability to use methods and tools [SU2] Assessment of ability to analyse information

Subject contents	<p>Lecture content:</p> <p>The essence of production and service management. Product and its design, quality, reliability, construction, demand forecasting. The concept of a production system. Structure, forms of organization and management of systems. Production process, arrangement of production equipment, production flow control (simulation and analytical methods). Designing production systems, production control. Planning material needs (MRP system) and production resources (MRP II). Synchronization of material flow according to the JIT concept. Production flow control (kanban system), lean manufacturing (LP), narrow-section management (OPT) and human resources. Computer-aided production and service management.</p> <p>Exercise content:</p> <ol style="list-style-type: none"> 1. Production programs of machine parts and assembly units forming complex products. 2. Calculation of the production lot size. 3. Calculation of the technological period for the production of batches of simple and complex products. 4. Calculation of in-process inventory and material needs 5. Equipment efficiency control - system approach. 6. Optimization of the company's production program - linear and aggregate programming models. 7. Project planning using network methods. <p>Design content:</p> <ul style="list-style-type: none"> - design of the production process; - design of the production station; - design of the production line. <p>As part of the project classes, the student is to acquire skills, among others: designing the distribution of workstations in the production structure of the subject specialization and designing the production department using the index method for calculations.</p>												
Prerequisites and co-requisites	<p>Methods and techniques of production improvement</p> <p>Innovations in production engineering</p> <p>Quality management systems</p> <p>Fundamentals of production and service management</p>												
Assessment methods and criteria	<table border="1"> <thead> <tr> <th>Subject passing criteria</th> <th>Passing threshold</th> <th>Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td>Final evaluation of two lecture tests</td> <td>60.0%</td> <td>30.0%</td> </tr> <tr> <td>Final evaluation of the exercises</td> <td>60.0%</td> <td>35.0%</td> </tr> <tr> <td>Final evaluation of the project</td> <td>60.0%</td> <td>35.0%</td> </tr> </tbody> </table>	Subject passing criteria	Passing threshold	Percentage of the final grade	Final evaluation of two lecture tests	60.0%	30.0%	Final evaluation of the exercises	60.0%	35.0%	Final evaluation of the project	60.0%	35.0%
Subject passing criteria	Passing threshold	Percentage of the final grade											
Final evaluation of two lecture tests	60.0%	30.0%											
Final evaluation of the exercises	60.0%	35.0%											
Final evaluation of the project	60.0%	35.0%

	Supplementary literature	Provided during classes and eLearning resources
	eResources addresses	Adresy na platformie eNauczanie:
Example issues/ example questions/ tasks being completed	1. The essence of production and service management. 2. The product and its design. 3. Production system: structure, forms of organization and management. 4. Production process: arrangement of production equipment and production flow control. 5. Planning needs and material resources and synchronizing the flow of materials according to the JIT concept. 6. Controlling the production flow according to the Kanban concept. 7. Computer-aided production and service management.	
Work placement	Not applicable
