| Subject name and code                       | , PG_00062076   |  |  |                                     |   |            |     |
| Field of study                              | Civil Engineering   |  |  |                                     |   |            |     |
| Date of commencement of studies             | October 2022  |  | Academic year of realisation of subject  |                                     | 2023/2024   |            |     |
| Education level                             | first-cycle studies   |  | Subject group  |                                     |   |            |     |
| Mode of study                               | Part-time studies   |  | Mode of delivery   |                                     | at the university   |            |     |
| Year of study                               | 2   |  | Language of instruction  |                                     | Polish  |            |     |
| Semester of study                           | 3   |  | ECTS credits   |                                     | 4.0   |            |     |
| Learning profile                            | general academic profile  |  | Assessment form  |                                     | exam  |            |     |
| Conducting unit                             | Department of Geotechnical and Hydraulic Engineering -> Faculty of Civil and Environmental Engineering  |  |  |                                     |   |            |     |
| Name and surname of lecturer (lecturers)    | Subject supervisor  |  | dr hab. inż. Michał Szydłowski   |                                     |   |            |     |
|   | Teachers  |  | dr inż. Patrycja Mikos-Studnicka<br><br>dr hab. inż. Michał Szydłowski   |                                     |   |            |     |
| Lesson types and methods of instruction     | Lesson type   | Lecture  | Tutorial   | Laboratory                          | Project   | Seminar    | SUM |
|   | Number of study hours   | 15.0   | 10.0   | 5.0                                 | 0.0   | 0.0        | 30  |
|   | E-learning hours included: 0.0  |  |  |                                     |   |            |     |
| Learning activity and number of study hours | Learning activity   | Participation in didactic classes included in study plan |  | Participation in consultation hours |   | Self-study | SUM |
|   | Number of study hours   | 30   |  | 0.0                                 |   | 0.0        | 30  |
| Subject objectives                          | Acquisition of knowledge and skills related to the description of the liquid state and hydrological processes.  |  |  |                                     |   |            |     |
| Learning outcomes                           | Course outcome  |  | Subject outcome  |                                     | Method of verification  |            |     |
|   | [K6_U05] Conducts research (obtaining information, simulations, experimental methods) in the field of construction in order to solve specific tasks and report research results.                              |  | The student carries out hydraulic experiments in the field of flows in pipelines, open channels and in the ground, related to civil engineering.   |                                     | [SU4] Assessment of ability to use methods and tools<br>[SU5] Assessment of ability to present the results of task                                |            |     |
|   | [K6_W02] Demonstrate knowledge and understanding of the processes and established methods of analysis / solution of engineering issues & problems in the field of civil engineering and of their limitations. |  | The student determines and analyzes the elements of the water balance of a river catchment. The student names and explains the physical processes that determine the circulation of water on the surface and in the ground. The student defines concepts and explains the principles of water movement in the natural environment. It determines the nature of water flow in closed conduits and open channels. Analyzes simplified flow models. |                                     | [SW1] Assessment of factual knowledge   |            |     |
|   | [K6_U02] Analyse & solve engineering issues & problems in the field of civil engineering by applying appropriate and relevant established analytical, numerical and experimental methods.                     |  | The student solves hydraulic problems and tasks in the field of flows in pipelines, open channels and in the ground, related to civil engineering.   |                                     | [SU1] Assessment of task fulfilment<br>[SU2] Assessment of ability to analyse information<br>[SU4] Assessment of ability to use methods and tools |            |     |
|   | [K6_U01] Apply knowledge and understanding of mathematics as well as sciences and engineering disciplines underlying civil engineering to solve engineering problems and issues.                              |  | The student calculates the basic parameters of water flow in pipelines, channels and hydraulic devices. It measures and determines the parameters of water movement. He pulls it out conclusions about water movement.   |                                     | [SU1] Assessment of task fulfilment<br>[SU3] Assessment of ability to use knowledge gained from the subject                                       |            |     |

|  |  |  |                               |
|--|--|--|-------------------------------|
| Subject contents   | LECTURE Fluid properties. The forces acting on the fluid. Basic equations of fluid flow. Classification of flows. Elements of hydrostatics. Kinematics of fluids. Simplify the equations of water flow. Conservation equations for one-dimensional flow. The fluid flow in closed pipes. The fluid flow in open channels. Flow of liquid through the wires. Filtration of water in the soil. Velocity and flow measurements. Hydrological cycle, hydrological characteristics of catchments. The parameters of the river basin. Water balance of the catchment. Flood, flow characteristics in rivers. CLASSES Hydraulics and hydrology computations: hydrostatics, pipelines, open channels, water filtration LABORATORY EXERCISES Analysis of flow in pipelines. Analysis of flow in open channel. Analysis of flow in ground. |  |                               |
| Prerequisites and co-requisites                                | No requirements  |  |                               |
| Assessment methods and criteria                                | Subject passing criteria   | Passing threshold  | Percentage of the final grade |
|  | Final test   | 60.0%  | 50.0%                         |
|  | Midterm colloquium   | 50.0%  | 25.0%                         |
|  | Laboratory experiments reports   | 100.0%   | 25.0%                         |
