|  | Number of study hours  | 45   |   | 5.0        |                        | 10.0                                   |         | 60  |
| Subject objectives                             | The aim of the course is to teach students to develop and evaluate transport analyzes related to the operation of large traffic generators. Students will become familiar with the standards, good practices and most common mistakes in developing this type of analysis. |  |   |            |                        |  |         |     |
| Learning outcomes                              | Course out   | Subject outcome                            |   |            | Method of verification |  |         |     |
|  |  |  | The student knows and is able to develop detailed solutions related to transport services for large traffic generators.   |            |                        | [SU1] Assessment of task<br>fulfilment |         |     |
|  | [K7_W14] has advanced<br>knowledge of transport<br>infrastructure maintenance and<br>management to an extent required<br>of the specialty  |  | The student knows and is able to<br>develop solutions related to<br>transport infrastructure in transport<br>systems in analyzing the impact of<br>investments on the functioning of<br>the transport system.               |            |                        | [SW1] Assessment of factual knowledge  |         |     |
|  | [K7_W11] has basic knowledge of<br>energy in transport   |  | The student knows methods and<br>solutions related to the<br>management and design of<br>elements of transport systems in<br>terms of analyzing the impact of<br>investments on the functioning of<br>the transport system. |            |                        | [SW1] Assessment of factual knowledge  |         |     |
