

## Subject card

Subject name and code	Automatics of industrial process, PG_00059838						
Field of study	Automation, Robotics and Control Systems						
Date of commencement of studies	February 2023		Academic year of realisation of subject		2023/2024		
Education level	second-cycle studies		Subject group				
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	3		ECTS credits		2.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Control Engineering -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Jacek Zawalich				
	Teachers		dr inż. Jacek Zawalich				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	15.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		0.0		0.0	30
Subject objectives	The aim of the course is to provide theoretical and practical knowledge in the field of designing automated technological processes in industrial conditions with the use of professional computer hardware and engineering software.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	K6_W08	The student knows the principles of selection and configuration of devices and systems used to control electric machines and servomechanisms.	[SW1] Assessment of factual knowledge
	K7_W07	Student identifies threats in complex control systems, defines methods of information protection in computer systems.	[SW3] Assessment of knowledge contained in written work and projects
	K7_W10	The student formulates the assumptions, goals and requirements of drive systems operating in systems and systems for controlling objects and industrial processes.	[SW3] Assessment of knowledge contained in written work and projects
	K7_U08	The student recognizes and describes the occurring threats from devices and control systems. The student designs technical systems containing appropriate security systems.	[SU1] Assessment of task fulfilment [SU3] Assessment of ability to use knowledge gained from the subject
	K7_K04	The student is able to check the operation of automatic industrial process control systems and react properly in abnormal and emergency conditions, taking into account the life and health hazards.	[SK3] Assessment of ability to organize work [SK5] Assessment of ability to solve problems that arise in practice
	K7_K05	The student is aware of the role of man in the economy and industrial production. He makes responsible decisions taking into account market requirements and the needs of the company.	[SK5] Assessment of ability to solve problems that arise in practice
Subject contents	Examples of industrial processes, formulating aims and tasks for industrial process control systems and technical problems in their implementation. Types and ways of describing selected objects and technical processes, their specific properties as well as static and dynamic characteristics. Control structures: open and closed systems, systems with feedback from output values and from the process status, with a reference model, with a status estimator. Types of industrial control devices: continuous PID controllers, two-position and three-position controllers with correction, stepper, fuzzy and predictive controllers. Selection of control, measuring and executive devices. Designing industrial process control systems using PLC controllers.		
	Knowledge of the subject Basics of Automation		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Lecture	50.0%	60.0%
	Project	100.0%	40.0%
