

。 GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Designing roads, streets and junctions, PG_00059873							
Field of study	Civil Engineering							
Date of commencement of studies	February 2024		Academic year of realisation of subject			2024/2025		
Education level	second-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study			
Mode of study	Full-time studies		Mode of delivery			at the university		
Year of study	1		Language of instruction		Polish			
Semester of study	2		ECTS credits		3.0			
Learning profile	general academic profile		Assessment form		assessment			
Conducting unit	Department of Transportation Engineering -> Faculty of Civil and Environmental Engineering							
Name and surname of lecturer (lecturers)	Subject supervisor Teachers		dr inż. Marcin Budzyński					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	30.0		0.0	45
	E-learning hours included: 0.0							
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study		SUM
	Number of study hours	45		5.0		25.0		75
Subject objectives	The aim of the course is to acquire knowledge in the design of expressways, especially interchanges.							

Learning outcomes	Course outcome	Subject outcome	Method of verification					
	[K7_K01] is aware of necessity of professional competences improvement; obeys the professional ethics code	Understanding the need to improve qualifications and increase competences in the field of road infrastructure design. Conduct in accordance with the principles of professional ethics.	[SK2] Assessment of progress of work [SK5] Assessment of ability to solve problems that arise in practice [SK4] Assessment of communication skills, including language correctness					
	[K7_W14] knows and applies building codes and obeys the Construction Law; has knowledge on environmetal impact of investment realisation	Knowledge of construction law and the impact of road investments on the natural and social environment.	[SW1] Assessment of factual knowledge [SW2] Assessment of knowledge contained in presentation [SW3] Assessment of knowledge contained in written work and projects					
	[K7_W06] has expanded knowledge about traffic theory, planing of road networks and junctions design, regarding economy, safety and environmental aspects	Knowledge and skills in the design and planning of road networks, including the design of interchange. The student has theoretical and practical knowledge in this area. The student is able to take into account aspects of economics, safety and environmental protection in road design.	[SW1] Assessment of factual knowledge [SW2] Assessment of knowledge contained in presentation [SW3] Assessment of knowledge contained in written work and projects					
	[K7_W15] has deep and adequate knowlege of civil engineering, within offered specialization and profile	Obtaining knowledge and competences in the field of road infrastructure design.	[SW1] Assessment of factual knowledge [SW2] Assessment of knowledge contained in presentation [SW3] Assessment of knowledge contained in written work and projects					
	[K7_U07] is able to design elements of road network, to apply the rules of traffic organisation and control, taking into account economy, safety and environmental factors,	Knowledge and skills in designing road infrastructure elements, traffic organization and traffic control systems. The student has theoretical and practical knowledge in this area. The student is able to take into account aspects of economics, safety and environmental protection in road design.	[SU1] Assessment of task fulfilment [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools [SU2] Assessment of ability to analyse information [SU5] Assessment of ability to present the results of task					
Subject contents	Lectures							
	1. Design of expressway sections, plan, profile, cross-section							
	2. General information about interchanges							
	3 Detailed analysis of design elements for selected types of interchanges							
	4 Canacity of interchanges							
	5 Problems of safety, economics and environmental protection in read investments							
	u. Design en urs							
	7. Road barriers and other expressway equipment							
	Projects							
	1. BIM elements in the design of expressways							
	2. Modeling of the expressway body							
	3. Design of interchanges elements.							
Prerequisites	Knowledge obtained at the stage of first-cycle studies in the subjects Road and Motorway Construction,							
and co-requisites	Design of intersections and interchanges.							
Assessment methods	Subject passing criteria	Passing threshold	Percentage of the final grade					
	Passing the project	80.0% 60.0%	20.0%					
	r accing the project	00.070	00.070					

Recommended reading	Basic literature	Collective work, ed. R. Krystek Road and motorway junctions, WKiŁ 2008

	eResources addresses	Adresy na platformie eNauczanie:			
Example issues/ example questions/ tasks being completed	 Sketch a diagram of a road junction for the given parameters Describe the cost-benefit analysis method, indicate its advantages and disadvantages List the scope of the feasibility study for a road investment Characterize the risk management method for the road network Design errors for junctions and sections of expressways that may cause hazards Determine the capacity of selected elements of a road junction For the examples given, determine the problems in the functioning of nodes. 				
Work placement	Not applicable
