

Subject card

Subject name and code	Stability of Structures , PG_00041314						
Field of study	Civil Engineering						
Date of commencement of studies	February 2024	Academic year of realisation of subject			2024/2025		
Education level	second-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			4.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Structural Mechanics Department -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Agnieszka Tomaszewska				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	30.0	0.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		5.0		35.0	100
Subject objectives	Presentation of the theory of structural stability and its application in stability analysis of different structures. Presentation of computer software application in stability analysis. Students' work in a field of linear and nonlinear stability analysis.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_U03] can perform classic statical and dynamical analysis of rod structures stability (trusses, frames and ties), both statically determined and undetermined as well as surface structures (plates, membranes and shells)		Student can design a structure with respect of stability problem		[SU1] Assessment of task fulfilment		
	[K7_W04] has knowledge on advanced strength of materials, modeling and optimisation of materials and constructions; has knowledge of fundamentals of Finite Element Method and general nonlinear analysis of engineering constructions and systems		Student knows software for stability analysis		[SW1] Assessment of factual knowledge		
	[K7_W03] has knowledge of Continuum Mechanics, knows rules of static analysis, stability and dynamics of complex rod, shell and volume structures, both in linear and basic nonlinear regime		Student can model structures using finite elements method in a field of statics and stability of beams, frames, slabs and shells		[SW1] Assessment of factual knowledge		
Subject contents	Fundamentals of theory of stability in problems of bars, frames, plates and shells.						
Prerequisites and co-requisites	Knowledge of structural mechanics and strength of materials						
Assessment methods and criteria	Subject passing criteria		Passing threshold		Percentage of the final grade		
	lectures		33.0%		40.0%		
	laboratories		33.0%		60.0%
