GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	RELIABILITY OF ENGINEERING STRUCTURES, PG_00041318		
Field of study	Civil Engineering		
Date of commencement of studies	February 2024	Academic year of realisation of subject	2024/2025
Education level	second-cycle studies	Subject group	Optional subject group Subject group related to scientific research in the field of study
Mode of study	Full-time studies	Mode of delivery	at the university
Year of study	1	Language of instruction	Polish
Semester of study	2	ECTS credits	3.0
Learning profile	general academic profile	Assessment form	assessment
Conducting unit	Structural Mechanics Department -> Faculty of Civil and Environmental Engineering		
Name and surname of lecturer (lecturers)	Subject supervisor	prof. dr hab. inż. Jarosław Górski	
	Teachers		

Lesson types and methods of instruction

Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
Number of study hours	30.0	15.0	0.0	0.0	0.0	45

E-learning hours included: 0.0

Learning activity and number of study hours

Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
Number of study hours	45	5.0	25.0	75

Subject objectives

General information on uncertainty modelling in engineering analysis and design
Distinction of three levels of reliability assessment, their domain and relevant operational methods

Learning outcomes

Course outcome	Subject outcome	Method of verification
[K7_W15] has deep and adequate knowlege of civil engineering, within offered specialization and profile	The student recognizes the uncertainty origins in the process of engineering analysis and design	[SW1] Assessment of factual knowledge
[K7_U03] can perform classic statical and dynamical analysis of rod structures stability (trusses, frames and ties), both statically determined and undetermined as well as surface structures (plates, membranes and shells)	The student performs numerical reliability assessment on a prescribed level	[SU5] Assessment of ability to present the results of task
[K7_W16] knows methods of diagnostics of engineering objects, has knowledge about different kinds of defects in constructions and its reasons; knows means of fixing and reinforcing of constructions.	The student recognizes basic uncertainty sources decisive for structural reliability	[SW1] Assessment of factual knowledge
[K7_W04] has knowledge on advanced strength of materials, modeling and optimisation of materials and constructions; has knowledge of fundamentals of Finite Element Method and general nonlinear analysis of engineering constructions and systems	The student adjusts a relevant reliability assessment method to the specified engineering task	[SW1] Assessment of factual knowledge

Subject contents

Probability theory - preliminaries.
Probabilistic models for load and resistance variables. Basic definitions - reliability, failure probability.
Random modelling of load and resistance variables. Reliability of structural systems.
Levels of reliability methods – classification. Level I methods - application to standards and codes, partial safety factors.
Level II methods – safety indices.
Level III method - numerical procedures. Monte Carlo simulation, engineering examples.
Random load combination. Time-variant reliability analysis.
