

Subject card

Subject name and code	Steel Structures , PG_00042238									
Field of study	Civil Engineering									
Date of commencement of studies	February 2024	Academic year of realisation of subject		2024/2025						
Education level	second-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study					
Mode of study	Full-time studies		Mode of delivery		at the university					
Year of study	1	Language of instruction		Polish						
Semester of study	2	ECTS credits		5.0						
Learning profile	general academic profile		Assessment form		exam					
Conducting unit	Department of Metal Structures -> Faculty of Civil and Environmental Engineering									
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Elżbieta Urbańska-Galewska							
	Teachers		dr inż. Dariusz Kowalski dr hab. inż. Elżbieta Urbańska-Galewska							
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM			
	Number of study hours	45.0	15.0	0.0	15.0	0.0	75			
E-learning hours included: 0.0										
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		SUM				
	Number of study hours	75		5.0		45.0				
125										
Subject objectives	Understanding the structure of metals and the influence of alloy components and heat treatment on material properties. Ability to select the appropriate steel grade and assess the safety of structural systems. Knowledge of advanced methods of dimensioning metal structures.									
Learning outcomes	Course outcome		Subject outcome		Method of verification					
	[K7_W02] knows principles of analysis, design and dimensioning of complex constructions and its elements		The student knows the principles of construction and dimensioning of class 4 steel structure elements		[SW1] Assessment of factual knowledge					
	[K7_U01] can evaluate and list any loads acting on constructions		The student is able to independently perform a design task		[SU1] Assessment of task fulfilment					
	[K7_U02] can design and dimension complex steel, concrete (including reinforced), wood and masonry constructions and its details		The student knows the principles of construction and dimensioning of class 4 steel structure elements		[SU1] Assessment of task fulfilment					
	[K7_W14] knows and applies building codes and obeys the Construction Law; has knowledge on environmental impact of investment realisation		The student has an organized and in-depth knowledge of the field of construction and the specialization of Metal Structures		[SW1] Assessment of factual knowledge					
Subject contents	Load capacity of steel structure elements in a postcritical state. Safety and reliability of steel structures. Shaping and dimensioning of tensile connections with bolts. Preloaded tension and shear connections. Semi-rigid connections in steel structures. Design of steel structures taking into account the plastic capacity reserve and material fatigue. Structure of the steel material. The influence of alloying elements and heat treatment on the mechanical properties of steel. Selection of steel grades for structures depending on their operating conditions. Material toughness and through-thickness properties.									
Prerequisites and co-requisites
