

Subject card

Subject name and code	Modelling in Civil Engineering, PG_00042232						
Field of study	Civil Engineering						
Date of commencement of studies	February 2024	Academic year of realisation of subject			2024/2025		
Education level	second-cycle studies	Subject group			Optional subject group		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Department of Building Structures and Material Engineering -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor	prof. dr hab. inż. Andrzej Tejchman-Konarzewski					
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		5.0		25.0	75
Subject objectives	Make acquaintance of students with different modelling methods of engineering structures.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K7_U02] can design and dimension complex steel, concrete (including reinforced), wood and masonry constructions and its details				[SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment		
	[K7_U12] can calculate and analyse the energy balance of a building				[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools		
	[K7_U10] can analyse complicated environmental loads acting on a construction; can apply proper processes to design marine and hydroengineering constructions taking into consideration hydrological and hydraulic impact				[SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment		
	[K7_W02] knows principles of analysis, design and dimensioning of complex constructions and its elements				[SW1] Assessment of factual knowledge		
	[K7_W04] has knowledge on advanced strength of materials, modeling and optimisation of materials and constructions; has knowledge of fundamentals of Finite Element Method and general nonlinear analysis of engineering constructions and systems				[SW1] Assessment of factual knowledge		

Subject contents	Behaviour of concrete and reinforced concrete under static and dynamic loads. Flat floors. Foundation on elastic subsoil. Truss models. Beam walls. Tanks. Discrete models for granular materials and concrete. Elastic-plastic theory. Failure criteria. Elasto-plastic constitutive models. Damage constitutive models. Regularization methods in FE calculations. Finite element calculation examples.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Exam	55.0%	90.0%
	Project	55.0%	10.0%
Recommended reading	Basic literature	Lectures.
