

## Subject card

Subject name and code	Diagnostics of building structures, PG_00045870						
Field of study	Civil Engineering						
Date of commencement of studies	February 2024		Academic year of realisation of subject			2024/2025	
Education level	second-cycle studies		Subject group			Optional subject group Subject group related to scientific research in the field of study	
Mode of study	Full-time studies		Mode of delivery			at the university	
Year of study	1		Language of instruction			Polish	
Semester of study	2		ECTS credits			2.0	
Learning profile	general academic profile		Assessment form			assessment	
Conducting unit	Department of Building Structures and Material Engineering -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Łukasz Skarzyński				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	15.0	0.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		2.0		3.0	50
Subject objectives	The aim of the course is to acquire knowledge about diagnostics of the engineering structures and to use the results for structure analysis.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_U16] is able to estimate the technical condition of engineering object; can interpret the results of constructions and materials examination;	Student has comprehensive knowledge of the structure condition assessment on the basis of diagnostic methods.	[SU5] Assessment of ability to present the results of task [SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information [SU1] Assessment of task fulfilment
	[K7_W16] knows methods of diagnostics of engineering objects, has knowledge about different kinds of defects in constructions and its reasons; knows means of fixing and reinforcing of constructions.	Student has comprehensive knowledge of the structure condition assessment and knows popular methods of repair and strengthening.	[SW3] Assessment of knowledge contained in written work and projects [SW2] Assessment of knowledge contained in presentation
	[K7_U02] can design and dimension complex steel, concrete (including reinforced), wood and masonry constructions and its details	Student has general knowledge in the subject area.	[SU5] Assessment of ability to present the results of task [SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject
	[K7_K01] is aware of necessity of professional competences improvement; obeys the professional ethics code	Student has general knowledge in the subject area.	[SK1] Assessment of group work skills [SK5] Assessment of ability to solve problems that arise in practice [SK3] Assessment of ability to organize work
[K7_W02] knows principles of analysis, design and dimensioning of complex constructions and its elements	Student has general knowledge in the subject area.	[SW3] Assessment of knowledge contained in written work and projects [SW2] Assessment of knowledge contained in presentation	
Subject contents	1. Introduction to structure diagnostics  2. Morphology of cracks.  3. Destructive and non-destructive diagnostic methods.  4. Using the results of diagnostic tests to analyse the structure.  5. Test load.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Colloquium	50.0%	60.0%
	Project	50.0%	40.0%
