

Subject card

Subject name and code		Steel and composite bridge structures, PG_00045875						
Field of study		Civil Engineering						
Date of commencement of studies		February 2024	Academic year of realisation of subject			2024/2025		
Education level		second-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study		Full-time studies	Mode of delivery			at the university		
Year of study		1	Language of instruction			Polish		
Semester of study		2	ECTS credits			5.0		
Learning profile		general academic profile	Assessment form			exam		
Conducting unit		Department of Railway Engineering -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)		Subject supervisor		dr hab. inż. Krzysztof Żółtowski				
		Teachers		dr inż. Marek Szafranski				
				dr hab. inż. Krzysztof Żółtowski				
Lesson types and methods of instruction		Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
		Number of study hours	30.0	15.0	0.0	15.0	0.0	60
		E-learning hours included: 0.0						
Learning activity and number of study hours		Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study	SUM	
		Number of study hours	60	10.0		55.0	125	
Subject objectives		To get a basic knowledge of design of metal and composite bridge structures. A simplified mechanical models and reality. Basic issues of construction and design.						
Learning outcomes		Course outcome		Subject outcome		Method of verification		
		[K7_U02] can design and dimension complex steel, concrete (including reinforced), wood and masonry constructions and its details		Can: a) identify computational problems related to the designed structural system; b) select methods and tools for static analysis and design of a given structural system; c) adopt design solutions in accordance with the constructional principles of steel and composite spans.		[SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment		
		[K7_W02] knows principles of analysis, design and dimensioning of complex constructions and its elements		Can: a) identify static and constructional problems related to the designed structural system; b) select methods and tools for static analysis and design of a given structural system.		[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge		
		[K7_W15] has deep and adequate knowledge of civil engineering, within offered specialization and profile		Has knowledge of steel and composite bridges, in particular: a) types and properties of structural materials; b) types of structural systems (statics, design, construction); c) analysis and design of structural elements due to standards design and FEM calculations.		[SW1] Assessment of factual knowledge		

Subject contents	<p>LECTURES</p> <ol style="list-style-type: none"> <li>Theory and real construction. The actual work of steel bridge elements (nodes, connections, bracing).</li> <li>Complex bridges (steel - concrete). Shear connectors flex, rigid - with applications. Technologies perform concrete slabs. Prestressed Composite. Steel lattice structures with concrete deck. Rheology technical approach.</li> <li>Steel girders - large spans with constant and variable height, sections open, closed one and hollow.</li> <li>Lattice bridges - large spans. Principles of constructing of main girders: lattice with parallel flanges and with variable height. Recent types of trusses - calculation. Bridges without bracings in upper flange stability issues of compressed flange. The distributions of stresses in gusset plates. Portal frames and the types of concentrations.</li> <li>Bridge bearings.</li> <li>Arched bridges. Types of arch bridges: Langer type bridges, arches combined with the stiffness of the roadway. Location of roadway: top, bottom, middle position and stability issue associated with it. Large and small span in arches - differences. Bracing of arches: portal frames inclined, horizontal, type Vierendeel solution. Bracing and the related problems of the theory of second order. Arched truss bridges.</li> <li>Suspended and cable stayed bridges. Types of bridge systems, geometry of cables, stays, pylons and roadway. Specificity of the construction of the road way. The construction of cables and hangers. Spans - cross sections open and hollow – wind action. Bearing for large suspension bridges. The specificity of assembly. Hanging footbridge. Dynamics and aerodynamics - selected issues. Overview of cable stayed and hanging bridges.</li> <li>Swing bridges - review.</li> </ol> <p>PRACTICAL CLASSES</p> <p>A design study of the truss railway bridge (welded, single-span, single-track)</p> <ol style="list-style-type: none"> <li>Construction of the span - structural and non-structural elements (equipment).</li> <li>Static schemes of the girders.</li> <li>Geometry of truss bridges - lattice types, girder's shape, decks.</li> <li>Cross-section of structural elements - girder elements, deck elements, bracings.</li> <li>Static analysis - spatial FEM model; loads and it's combinations; influence lines, inner forces (normal forces, bending moments).</li> <li>Designing of elements - ultimate limit state, fatigue, serviceability limit state.</li> <li>Designing of construction joints.</li> <li>Designing of truss girders - general requirements.</li> <li>Structural drawings.</li> </ol>											
Prerequisites and co-requisites	Structural Mechanics, Strength of Materials. The theory of design of steel and reinforced concrete											
Assessment methods and criteria	<table border="1"> <thead> <tr> <th data-bbox="456 1021 794 1048">Subject passing criteria</th> <th data-bbox="801 1021 1139 1048">Passing threshold</th> <th data-bbox="1145 1021 1482 1048">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="456 1057 794 1084">written exam</td> <td data-bbox="801 1057 1139 1084">60.0%</td> <td data-bbox="1145 1057 1482 1084">50.0%</td> </tr> <tr> <td data-bbox="456 1093 794 1120">design work</td> <td data-bbox="801 1093 1139 1120">70.0%</td> <td data-bbox="1145 1093 1482 1120">50.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	written exam	60.0%	50.0%	design work	70.0%	50.0%
