

Subject card

Subject name and code	, PG_00059975						
Field of study	Environmental Engineering						
Date of commencement of studies	February 2024	Academic year of realisation of subject			2024/2025		
Education level	second-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	3	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Geotechnical and Hydraulic Engineering -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Dariusz Gąsiorowski					
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		5.0		30.0	80
Subject objectives	Mastering the basic computational techniques of the fluid dynamics.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	K7_U06	The student is able to use knowledge of the basics of numerical methods and mathematical methods for description and analysis environmental engineering problems.			[SU5] Assessment of ability to present the results of task [SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment [SU3] Assessment of ability to use knowledge gained from the subject		
	K7_U12	The student formulates the problem for solutions of equations describing the flows in environmental engineering.			[SU3] Assessment of ability to use knowledge gained from the subject [SU5] Assessment of ability to present the results of task [SU1] Assessment of task fulfilment		
	K7_W06	The student knows the basic problems of water flow in environmental engineering systems.			[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects		
	K7_W01	The student describes the solution of an engineering problem using computer modeling based on computational fluid dynamics methods.			[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects		

Subject contents	<p>LECTURE: Basic physical properties of fluids. General equations describing fluid dynamics models. Compressible viscous fluid model. Simplified models of fluid dynamics: an incompressible inviscid flow and an incompressible viscous flow. Laminar and turbulent flow. Boundary layer in incompressible and compressible fluid models for laminar and turbulent flow. Determination of an averaged characteristics of turbulent flow. Reynolds equations. Basic models of turbulence. Classification of equations. Formulating problems of solving fluid dynamics equations - correct setting of boundary conditions. Fluid dynamics equations in the curvilinear coordinate system. Transformation between physical and computational coordinate systems. Generating numerical grids. Numerical solution of differential equations with partial derivatives. Finite difference method, finite element method, finite volume method, control volume method. Accuracy and stability of a numerical solution: numerical diffusion error and numerical dispersion error. Effectiveness of the numerical solution. Parallelization of the computation process using multiprocessor computers. Techniques of decomposition with respect to space and processes. Solution of the problem of water flow in a pipeline with variable geometry, taking into account heat transfer. Solutions to the problem of free and forced air convection in a room.</p> <p>LABORATORY: Learning computer modeling with ANSYS Fluent software. Modeling of water flow in a pipeline with variable geometry including heat transfer. Modeling of convective air flow in a room.</p>		
Prerequisites and co-requisites	Knowledge from the lectures: mathematics, basic computer science, fluid mechanics		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Test	51.0%	50.0%
	Laboratory reports	60.0%	50.0%
