

## Subject card

Subject name and code	Functional Properties of Food Ingredients, PG_00058619							
Field of study	Biotechnology							
Date of commencement of studies	February 2024		Academic year of realisation of subject		2023/2024			
Education level	second-cycle studies		Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery			at the university		
Year of study	1		Language of instruction			Polish		
Semester of study	1		ECTS credits			4.0		
Learning profile	general academic profile		Assessme	ssment form		assessment		
Conducting unit	Department of Chemistry, Technology and Biochemistry of Food -> Faculty of Chemistry							
Name and surname	Subject supervisor		dr hab. inż. Hanna Staroszczyk					
of lecturer (lecturers)	Teachers		dr hab. inż. Hanna Staroszczyk dr inż. Szymon Mania dr inż. Agata Sommer					
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM
of instruction	Number of study hours	15.0	0.0	45.0	0.0		0.0	60
	E-learning hours included: 0.0							
Learning activity and number of study hours	Learning activity	Participation in classes include plan		Participation in consultation hours		Self-study		SUM
	Number of study hours	60		8.0		32.0		100
Subject objectives	To familiarize students with the knowledge of the impact of the interaction of major components on the properties and quality of foods and the role of these components in human nutrition, as well as of contamination and food safety.							

Data wydruku: 18.05.2024 17:37 Strona 1 z 3

Course outcome	Subject outcome	Method of verification				
[K7_W07] knows issues related to plant and animal raw materials, their quality, impact on human health, processing technology and chemical and biological hazards resulting from process treatment and storage	The student knows about the impact of nutrient interactions on the properties and quality of food products, as well as their effects on food safety.	[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects				
[K7_W02] has advanced knowledge of structure and activity of enzymes and biologically active compounds also in pharmacological context, knows basic instrumental methods of qualitative and quantitative analysis and activity studies of biomolecules	The student knows about the influence of enzymes present in food raw materials on the properties and quality of the resulting products. He is able to determine them.	[SW1] Assessment of factual knowledge [SW3] Assessment of knowledge contained in written work and projects				
[K7_U05] is able to apply instrumental methods of quantitative and qualitative analysis and studies on activity of biomolecules, select and apply diagnostic and analytical methods in the field of his/her specialty with particular emphasis on genetic, molecular and microbiological diagnostics and diagnostics based on antigen-antibody reaction	Student isolates and identifies the basic food ingredients from raw materials of plant and animal origin.	[SU1] Assessment of task fulfilment [SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject				
[K7_K02] is aware of the limitations and the necessity of continuous development of knowledge and technology; understands the need for education and constant training	Student is able to justify the importance of the development of science and technology for the development of food economy.	[SK2] Assessment of progress of work [SK5] Assessment of ability to solve problems that arise in practice				
Lecture. Physical, biochemical and chemical interactions of proteins, polysaccharides, lipids and metal ions in terms of storage and processing of food and their effects on the properties and quality of the products. The role of nutrients in human nutrition. Contamination and food safety.  Laboratory. Caramelization of saccharides. Comparison of the lactose content in dairy products. The properties of gluten. Fractionation of muscle proteins. Proteolytic activity of muscle proteins. Functional properties of proteins. The influence of different technological factors on the ability of gelation of gelatine. Interaction of proteins and polysaccharides in aqueous solutions. Colorants. Study of the kinetics of the oxidation of fats. Analysis of compounds forming in fats during high temperature processing. Qualitative composition of phospholipids present in plant and animal products. Comparison of the composition of the fatty acids present in plant and animal phospholipids.						
Knowledge of organic chemistry, general knowledge of the composition and chemical and functional properties of food components.						
Subject passing criteria	Passing threshold	Percentage of the final grade				
midterm colloquium	60.0%	50.0%				
laboratory tests	60.0%	50.0%				
Basic literature  Red. Sikorski Z.E., Staroszczyk H. Chemia zwynosci. Tom 1. Głowne składniki zywnosci; Tom 2. Bilogiczne własciwosci składnikow zywnosci. PWN. Warszawa 2017.  Red. Gawecki J. Zywienie człowieka. Podstawy nauki o zywienie PWN. Warszawa 2012.						
	[K7_W07] knows issues related to plant and animal raw materials, their quality, impact on human health, processing technology and chemical and biological hazards resulting from process treatment and storage [K7_W02] has advanced knowledge of structure and activity of enzymes and biologically active compounds also in pharmacological context, knows basic instrumental methods of qualitative and quantitative analysis and activity studies of biomolecules [K7_U05] is able to apply instrumental methods of quantitative and qualitative analysis and studies on activity of biomolecules, select and apply diagnostic and analytical methods in the field of his/her specialty with particular emphasis on genetic, molecular and microbiological diagnostics and diagnostics based on antigen-antibody reaction [K7_K02] is aware of the limitations and the necessity of continuous development of knowledge and technology; understands the need for education and constant training  Lecture. Physical, biochemical and of the continuous of storage and processing of the role of nutrients in human nutrition. The role of nutrients in human nutrition of properties of gluten. Fractionation of properties of proteins. The influence Interaction of proteins and polysacctory. Caramelization of sacch properties of proteins. The influence Interaction of proteins and polysacctory of properties of proteins. The influence Interaction of proteins and polysacctory of properties of proteins and polysacctory of proteins and polysacctory of proteins and polysacctory of properties of proteins and polysacctory of p	[K7_W07] knows issues related to plant and animal raw materials, their quality, impact on human health, processing technology and chemical and biological hazards resulting from process treatment and storage [K7_W02] has advanced knowledge of structure and activity of enzymes and biologically active compounds also in pharmacological context, knows basic instrumental methods of qualitative and quantitative analysis and activity studies of biomolecules [K7_U05] is able to apply instrumental methods of quantitative and qualitative analysis and studies on activity of biomolecules, select and apply diagnostic and analytical methods in the field of his/her specialty with particular emphasis on genetic, molecular and microbiological diagnostics and diagnostics based on antigen-antibody reaction [K7_K02] is aware of the limitations and the necessity of continuous development of knowledge and technology; understands the need for education and constant training  Lecture. Physical, biochemical and chemical interactions of proteins, poly in terms of storage and processing of food and their effects on the proper The role of nutrients in human nutrition. Contamination and food safety.  Laboratory. Caramelization of saccharides. Comparison of the lactose on Interaction of proteins. The influence of different technological factors on Interaction of proteins and polysaccharides in aqueous solutions. Colora oxidation of fats. Analysis of compounds forming in fats during high temp composition of phospholipids present in plant and animal products. Comparison of phospholipids present in plant and animal products. Comparison of phospholipids present in plant and animal products. Comparison of phospholipids present in plant and animal products. Comparison of phospholipids present in plant and animal products. Comparison of phospholipids present in plant and animal products. Comparison of phospholipids present in plant and animal products. Comparison of phospholipids present in plant and animal products. Passing threshold midterm collo
