

## Subject card

Subject name and code	From Idea To Industry, PG_00049136						
Field of study	Chemical Technology						
Date of commencement of studies	February 2024	Academic year of realisation of subject			2024/2025		
Education level	second-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			1.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Polymers Technology -> Faculty of Chemistry						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Maciej Sienkiewicz					
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	0.0	15.0	0.0	15
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	15		5.0		5.0	25
Subject objectives	Teaching students to study design of prototypes of simple products classified as inventions in the field of polymer technology, products and functional materials from the decisions of pro-environmental elements and preliminary materials for a patent application or description of know-how.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	K7_K04	knows the organization of team work and the ways of division of tasks	[SK3] Assessment of ability to organize work [SK1] Assessment of group work skills
	K7_W07	Is able to use the knowledge of biotechnological processes in the design of biologically active materials used, for example, in medicine, in the food industry, cosmetics industry, production of polymeric materials, and properly adapt known production technologies in order to obtain these materials.	[SW1] Assessment of factual knowledge
	K7_W08	Is able to use the knowledge of colloidal systems in the designing of products such as detergents, polymer products, and functional materials, and can adapt production technologies to their obtaining	[SW1] Assessment of factual knowledge
	K7_W01	Is able to use in the designing of products the knowledge gained in the field of chemical reactor engineering, chemometry, technological processes appropriate to the field of specialization, and knows how to use the mathematical tools for their modeling	[SW1] Assessment of factual knowledge
K7_K01	Is able to use the knowledge of technology appropriate for the specialization to design a prototype of simple pro-environmental products.	[SK5] Assessment of ability to solve problems that arise in practice	
Subject contents	Designing innovative products, their trademark (logotype), preparing an overview of the state of the art based on scientific publications and patents with an application indicating the validity of introducing innovation, developing the stages of making a prototype or production/synthesis process, etc., description of the necessary raw materials and test methods to be performed and testing the prototype, preparation of a mini-business plan taking into account raw material costs, competitive products on the market, preparation of a manuscript for a patent application or a description of know-how.		
Prerequisites and co-requisites	basic knowledge of chemistry and technology of polymers, cosmetics and functional materials		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	final presentation	60.0%	50.0%
	partial reports	60.0%	30.0%
	activity in the group	60.0%	20.0%
