

Subject card

Subject name and code	Industrial analytics , PG_00038543								
Field of study	Chemical Technology								
Date of commencement of studies	February 2024		Academic year of realisation of subject		2023/2024				
Education level	second-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study				
Mode of study	Full-time studies		Mode of delivery		at the university				
Year of study	1		Language of instruction		Polish				
Semester of study	1		ECTS credits		5.0				
Learning profile	general academic profile		Assessment form		assessment				
Conducting unit	Department of Analytical Chemistry -> Faculty of Chemistry								
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Andrzej Wasik						
	Teachers		prof. dr hab. inż. Andrzej Wasik dr inż. Tomasz Dymerski dr hab. inż. Mariusz Marć dr inż. Małgorzata Rutkowska dr inż. Bartłomiej Cieślik dr inż. Weronika Hewelt-Belka dr inż. Tomasz Majchrzak						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM		
	Number of study hours	15.0	0.0	60.0	0.0	0.0	75		
E-learning hours included: 0.0									
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM		
	Number of study hours	75		5.0		45.0	125		
Subject objectives	TAcquiring the necessary knowledge in the field of - preparation of samples for analysis; - chromatographic techniques separations and their application to solve industrial problems; - quantitative marking selected analytes; - calculating the results of quantitative analyzes using mathematical methods and graphic images and their statistical interpretation; - validation of methods (use of reference materials, etc.);- problems related to transferring aspects of laboratory analysis to an industrial scale.								

Learning outcomes	Course outcome	Subject outcome	Method of verification									
	K7_W04	The student is able to solve analytical problems with the use of elemental analysis of organic compounds; can use appropriate separation techniques with particular emphasis on chromatographic techniques	[SW2] Assessment of knowledge contained in presentation									
	K7_U05	Student is able to properly prepare samples for analysis and perform analysis using chromatographic, spectrophotometric and electrochemical techniques; is able to calculate the results of quantitative analyzes using mathematical and graphic methods and interpret them statistically; carry out validation of methods using reference materials, organize and use the results of inter-laboratory tests.	[SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task									
	K7_U10	The student is able to carry out research with the use of selected modern analytical techniques and measuring devices	[SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject									
	K7_K03	The student is able to interact and work in a group, assuming various roles in it. Is able to properly define the priorities for the implementation of the task set by himself or others	[SK5] Assessment of ability to solve problems that arise in practice									
Subject contents	During the course, the application of basic and advanced analytical techniques will be presented, i.e. elemental analysis, GC, LC, extraction techniques, etc. to solve industrial problems. Industrial analytics problems and ways to solve them will be presented. The lectures will include content presented by invited people working in industry (issues related to the nature of their laboratories, cooperation with analytical laboratories, challenges of transferring the micro scale to the macro scale, obtaining financial commitments from various sources for the implementation of research goals coupled with industrial units). The classes will include presenting problems (case studies) and methods of solving them.											
Prerequisites and co-requisites	Passed subjects: Inorganic Chemistry, Organic Chemistry, Physical Chemistry, Physics, Analytical Chemistry. Basic knowledge of analytical chemistry.											
Assessment methods and criteria	<table border="1"> <thead> <tr> <th>Subject passing criteria</th><th>Passing threshold</th><th>Percentage of the final grade</th></tr> </thead> <tbody> <tr> <td>Lecture: exams and short tests</td><td>60.0%</td><td>50.0%</td></tr> <tr> <td>Laboratory: Tests and reports</td><td>60.0%</td><td>50.0%</td></tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	Lecture: exams and short tests	60.0%	50.0%	Laboratory: Tests and reports	60.0%	50.0%
Subject passing criteria	Passing threshold	Percentage of the final grade										
Lecture: exams and short tests	60.0%	50.0%										
Laboratory: Tests and reports	60.0%	50.0%

Example issues/ example questions/ tasks being completed	Describe the problems encountered by an analytical chemist in an industrial laboratory. Present methods for solving them. Discuss the analytical procedure for determining selected metals in samples after incineration of industrial waste. Discuss issues related to indoor air analysis. Discuss issues related to overcoming barriers to cooperation between university and industrial units.
Work placement	Not applicable
