

Subject card

Subject name and code	Industrial Electronics, PG_00038477						
Field of study	Electrical Engineering						
Date of commencement of studies	February 2024	Academic year of realisation of subject			2023/2024		
Education level	second-cycle studies	Subject group					
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	1	ECTS credits			2.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Electrical Engineering of Transport -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Leszek Jarzębowicz					
	Teachers	dr hab. inż. Jarosław Łuszcz dr hab. inż. Leszek Jarzębowicz					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study		SUM
	Number of study hours	30	10.0		10.0		50
Subject objectives	Learning about various solutions and technical conditions for the use of electronic devices in industrial environment.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	K7_U04	The student is able to select the required bandwidth of the transmission link for the 3D scanning system based on given technical parameters.			[SU2] Assessment of ability to analyse information		
	K7_W06	The student knows the transmission mechanisms of electromagnetic disturbances (EMC) in electronic systems and knows the technical means of reducing these disturbances.			[SW1] Assessment of factual knowledge		
Subject contents	Fundamental mathematical relations. Printed circuit boards (PCBs). Fiber optic technology. Oscilloscope measurements. Interferences in electronic devices, selected practical issues. Servodrives. Intelligent transistor modules IPM and ASIPM. Microprocessor control of electronic devices. Systems for measuring position and angular velocity. Contactless electrical energy transfer systems. Energy harvesting systems. Industrial vision methods using laser triangulation.						
Prerequisites and co-requisites	Basic knowledge of electrical engineering, electronics and control engineering.						
Assessment methods and criteria	Subject passing criteria	Passing threshold			Percentage of the final grade		
	Final test	60.0%			70.0%		
	Reports and tests	60.0%			30.0%

	eResources addresses	Adresy na platformie eNauczanie:
Example issues/ example questions/ tasks being completed	<ol style="list-style-type: none"> 1. Discuss the principle of operation and the output waveforms of an incremental encoder. 2. Discuss the structure and the principle of operation of a vision system for three-dimensional scanning. 3. Discuss the technical means used to achieve high efficiency and high transmitted power in contactless electric energy transmission systems. 	
Work placement	Not applicable
