

§ GDAŃSK UNIVERSITY § OF TECHNOLOGY

Subject card

Subject name and code	Fundamentals of Control, PG_00056914							
Field of study	Electrical Engineering							
Date of commencement of studies	October 2022		Academic year of realisation of subject			2023/2024		
Education level	first-cycle studies		Subject group					
Mode of study	Full-time studies		Mode of delivery			at the university		
Year of study	2		Language of instruction			Polish		
Semester of study	4		ECTS credits			4.0		
Learning profile	general academic profile		Assessment form			assessment		
Conducting unit	Department of Controlled Electric Drives -> Faculty of Electrical and Control Engineering							
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Arkadiusz Lewicki					
	Teachers		dr hab. inż. Marek Adamowicz dr hab. inż. Arkadiusz Lewicki					
Lesson types and methods	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM
of instruction	Number of study hours	30.0	30.0	0.0 0.0			0.0	60
	E-learning hours included: 0.0							
	Address on the e-lear	ning platform:	https://enaucza	nie.pg.edu.pl/r	noodle/	course/	view.php?id=1	1155
Learning activity and number of study hours	Learning activity	ng activity Participation in c classes included plan		actic Participation in study consultation hours		Self-study SUM		SUM
	Number of study hours	60		5.0		35.0		100
Subject objectives	The student learns structure and function of automatic control systems. Learns the methods of automatic control system descibing and methods of linear system analisys of automatic control. Learn how to determine the dynamic characteristics of linear systems and to determine the dynamic properties of system on the basis of its characteristic. Scores based on the ability to identify the characteristics of the dynamic properties of systems and analysis of automatic control systems. He learns the ways and transform block diagrams, is gaining the ability to study the stability							
Learning outcomes	Course outcome		Subject outcome		Method of verification			
	K6_U07		Student can design a closed control system, select regulators and analyze the stability and dynamic properties of the system			[SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject [SU1] Assessment of task fulfilment		
	K6_W08		Ability to analyze linear automation systems. Ability to determine static and dynamic characteristics. Ability to stability testing. Knowledge of structures of basic types of controllers, selection of gains and synthesis of a closed control system. Knowledge of basic automation blocks.			[SW3] Assessment of knowledge contained in written work and projects		
Subject contents	The control system and its components, positive and negative feedback. Laplace transformation, transfer function. Block diagrams. Response in time domain: measurement and calculation for a given transmittance. Frequency response: measurement and calculation for a given transmittance. Automation components: proportional, inertial, derivative, oscillating, delay. The characteristics of typical controllers: P, I, PI, PD, PID. Dynamic of control system. The stability of linear control systems, stability criteria. Sets of controller parameters. Examples of typical control systems.							
Prerequisites and co-requisites								

Assessment methods	Subject passing criteria	Passing threshold	Percentage of the final grade				
and criteria	Midterm colloquium	60.0%	50.0%				
	Studies prepared by students	60.0%	50.0%				
Recommended reading	Basic literature	M. Żelazny <i>Podstawy automatyki</i> , PWN, Warszawa ,1976

Example issues/ example questions/ tasks being completed	Determine the stability of the system,						
	Determine the transmittance of the system,						
	Convert the block diagram of the control system,						
	Sketch and analyze the Bode / Nyquist characteristics. for the layout.						
	Select the settings of regulators for which the system will be stable						
	Determine the stability margin						
Work placement	Not applicable
