GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Programmable Controllers, PG_00038103					
Field of study	Electrical Engineering					
Date of commencement of studies	October 2022		Academic year of realisation of subject		2024/2025	
Education level	first-cycle studies		Subject group			
Mode of study	Full-time studies		Mode of delivery		at the university	
Year of study	3		Language of instruction		Polish	
Semester of study	5		ECTS credits		4.0	
Learning profile	general academic profile		Assessment form		exam	
Conducting unit	Department of Power Electronics and Electrical Machines -> Faculty of Electrical and Control Engineering					
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Ireneusz Mosoń				
	Teachers	dr inż. Ireneusz Mosoń				

Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	15.0	15.0	0.0	0.0	60
	E-learning hours included: 0.0						

Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
	Number of study hours	60	6.0	34.0	100

Subject objectives	Acquisition by students basic knowledge about programmable controllers - their structure, principle of operation, implementation in control systems - and the skill of programming programmable controllers.

Learning outcomes	Course outcome	Subject outcome	Method of verification
	K6_W08	Student describes types and structures of programmable controllers. Explains principle of programmable controller operation and principle of execution of the user program. Student describes the role and functions that programmable controllers perform in automatic control systems.	[SW1] Assessment of factual knowledge
	K6_U07	Student selects programmable controllers for specific applications and knows how to design simple control systems with programmable controllers. Student analyses requirements of control tasks and creates control algorithms. Writes, debugs and tests programs of low and middle complexity for control of different control objects. Creates user functions and function blocks. Creates simple visualisation applications.	[SU1] Assessment of task fulfilment [SU2] Assessment of ability to analyse information [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools
	K6_K01	Student understands how important is to widen permanently his knowledge and skils concerning programmable controllers and their applications. For this purpose he is able to use current technical documentations and publications.	[SK5] Assessment of ability to solve problems that arise in practice

Subject contents	**LECTURE** Programmable controllers in control systems. Types, structure and principle of operation. Execution of the user program. Process image memory. Hardware characteristics. Interaction with a controlled process. Digital, analog and special input/output circuits. Fundamentals of programming. PN-EN 61131-3 standard. Programming model. Programming languages. Data types and declaration o variables. Addressing. Program organization units - programs, functions and function blocks. Creation of user functions and fuction blocks. Structuring of user programs. Factors of a program quality. Networking programmable controllers. Network structures. Communication interfaces and transmission media. Methods of media access control. Communication protocols (Suconet K, Modbus RTU, Profibus DP, AS-i). Industrial Ethernet (protocols: Modbus TCP, Powerlink, Profinet). Design of programmable controllers based control systems. Selection of a programmable controller depending on an application. Realization of a human - machine interface (HMI). SCADA programs. **TUTORIALS** Number systems used in programmable controllers. Data types and functions of their conversion. Creation of control algorithms; grafical elements of the algorithms. Programming software Easy soft CoDeSys. Creation of control programs (in IL, LD, FBD, ST, CFC languages) and their debugging with the use of program simulator (virtual controller). Creation of visualisation applications. Programming of control of sequential processes in SFC language. **LABORATORY** Programming software Sucosoft S40 (structure; konfiguring control systems; editting, debuging, testing and documenting programs). Program for a conveyor control - I and II. Conversion functions and arithmetic operators. Counting events and compiler options. Creation of the user function block. Modifying programs and changing variable values in On-line mode. Programming PS4-200 and PS4-150 series controllers in the network (master - active slave).
Prerequisites and co-requisites	Basic knowledge on electronics and digital technique.

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Practical exercise	60.0%	30.0%
	Laboratory	80.0%	30.0%
	Written exam	50.0%	40.0%

	eResources addresses	Adresy na platformie eNauczanie:

Example issues/ example questions/ tasks being completed	Principle of operation of a programmable controller. What is the proces image memory and what are the advantages and disadvantages of its usage? Programming languages of programmable controllers. What are the differences betwen functions and function blocks? Network operation of programmable controllers. Writing, debugging and testing control programs of specified control objects with simple visualisations.
Work placement	Not applicable
