

## Subject card

Subject name and code	Programming of ARM microcontrollers, PG_00031366						
Field of study	Electrical Engineering						
Date of commencement of studies	October 2021	Academic year of realisation of subject			2023/2024		
Education level	first-cycle studies	Subject group					
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	3	Language of instruction			Polish		
Semester of study	6	ECTS credits			4.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Controlled Electric Drives -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Filip Wilczyński					
	Teachers	dr inż. Filip Wilczyński					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	30.0	0.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study		SUM
	Number of study hours	60	5.0		35.0		100
Subject objectives	The aim of the course is to provide the ARM-core microcontrollers. The aim of the course is the discussion of the ARM architecture and its possible applications in automation and electrical engineering as well as in everyday life. Deepening programming skills in C by developing control functions. Programming by student the peripheral interface with STM32F407 processor allows to education programming skills of modern electronic devices.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	K6_W10	The student has knowledge of the basics of electricity conversion and the basics of electric traction			[SW3] Assessment of knowledge contained in written work and projects [SW2] Assessment of knowledge contained in presentation [SW1] Assessment of factual knowledge		
	K6_K01	The student has the need and awareness for self-education in microcontroller programming			[SK1] Assessment of group work skills [SK5] Assessment of ability to solve problems that arise in practice		
	K6_U09	The student is able to select equipment for the load and short-circuit conditions			[SU3] Assessment of ability to use knowledge gained from the subject [SU1] Assessment of task fulfilment		
	K6_K05	The student has knowledge in the field of occupational health and safety and is able to respond appropriately in a situation that threatens health and life			[SK3] Assessment of ability to organize work [SK4] Assessment of communication skills, including language correctness [SK5] Assessment of ability to solve problems that arise in practice		

Subject contents	<ol style="list-style-type: none"> <li>1. ARM architecture</li> <li>2. ARM architecture</li> <li>3. Input/Output ports</li> <li>4. Programming in C</li> <li>5. Series and parallel microcontroller interfaces (RS232, USART...)</li> <li>6. A/C, C/A transducer</li> <li>7. A/C, C/A transducer</li> <li>8. Interruptions, timers, clocks...</li> <li>9. The examples of the program functions</li> <li>10. The examples of the program functions</li> <li>11. Microcontroller cooperation with FPGA</li> <li>12. The wire and wireless interfaces (I2C, I2S, CAN)</li> <li>13. The wire and wireless interfaces (I2C, I2S, CAN)</li> <li>14. Example applications</li> <li>15. Example applications</li> </ol>		
Prerequisites and co-requisites	The basic level of C/C++ programming skill.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	The laboratory reports	60.0%	80.0%
	Project	60.0%	20.0%
