

Subject card

Subject name and code	, PG_00053437						
Field of study	Electrical Engineering						
Date of commencement of studies	October 2021	Academic year of realisation of subject			2024/2025		
Education level	first-cycle studies	Subject group					
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	4	Language of instruction			Polish		
Semester of study	7	ECTS credits			4.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor	prof. dr hab. inż. Jarosław Guziński					
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours		Self-study		SUM
	Number of study hours	30	5.0		65.0		100
Subject objectives	The aim of the course is to acquire knowledge and skills in the field of electric autonomous vehicles.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	K6_K05	Student is able to assess the threats and counteract them in the electric vehicle power supply system			[SK5] Assessment of ability to solve problems that arise in practice		
	K6_U09	Can select the electrical equipment of an electric vehicle			[SU1] Assessment of task fulfilment		
	K6_K01	Is aware of continuous training in the field of electric vehicle drives			[SK2] Assessment of progress of work		
	K6_U10	Is able to design the electrical system of an electric vehicle			[SU1] Assessment of task fulfilment		
	K6_W10						
Subject contents	<p>Lecture. Introductory news. Energy demand, battery capacity assessment, vehicle energy consumption meters, driving range estimation. Energy storage and converters for cooperation with energy sources: batteries, flywheel, fuel cells, supercapacitors. Automatic systems of converter drive of vehicles with electric motors. Vehicle drives with permanent magnet motors. Electric drives in hybrid vehicles: diesel-electric. Methods of controlling electric motors in vehicles. Sensorless control. Overriding vehicle control. Driving direction control. Control in emergency states. Design of converters. Electric boat and aircraft drives.</p> <p>Lab. The simulation part of modeling electric drives of vehicles. Laboratory exercises using electric vehicles and stationary electric drives with PMSM and BLDC motors and five-phase induction motors.</p> <p>Design. Design of an electric vehicle with autonomous power supply.</p>						
Prerequisites and co-requisites	Knowledge of the basics of electrical engineering and automation						
Assessment methods and criteria	Subject passing criteria	Passing threshold			Percentage of the final grade		
	Lecture	60.0%			30.0%		
	Lab	60.0%			40.0%		
	Project	60.0%			30.0%

	eResources addresses	Adresy na platformie eNauczenie:
Example issues/ example questions/ tasks being completed	<ol style="list-style-type: none"> 1. List and describe the types of electric vehicle drive systems. 2. Power supply system and PMSM electric drive control in the vehicle. 3. Select the motor for the electric drive of the vehicle and estimate the driving range. 4. Discuss the types of electric machines used to drive electric vehicles. 5. Present a method of converting a passenger combustion car into an electric car. 	
Work placement	Not applicable
