

表 GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

	Dower Engineering Electronics, DC, 00029429								
Subject name and code	Power Engineering Electronics, PG_00038438								
Field of study	Electrical Engineering								
Date of commencement of studies	October 2023		Academic year of realisation of subject			2024/2025			
Education level	first-cycle studies		Subject group						
Mode of study	Full-time studies		Mode of delivery			at the university			
Year of study	2		Language of instruction			Polish			
Semester of study	4		ECTS credits			4.0			
Learning profile	general academic profile		Assessment form			exam			
Conducting unit	Department of Power Electronics and Electrical Machines -> Faculty of Electrical and Control Engineeri						ngineering		
Name and surname	Subject supervisor prof. dr hab. inż. Ryszard Strzelecki								
of lecturer (lecturers)	Teachers								
Lesson types and methods of instruction	Lesson type Lecture		Tutorial	Laboratory Projec		t	Seminar	SUM	
	Number of study hours	30.0	15.0	15.0	0.0		0.0	60	
	E-learning hours included: 0.0								
Learning activity and number of study hours	Learning activity	Participation in classes includ plan	n didactic ed in study	Participation in consultation hours		Self-study		SUM	
	Number of study hours	60		8.0		32.0		100	
	introduction to the basic structures of power electronic systems, introduction to basic converter systems design methods.								
Learning outcomes	Course outcome		Subj	Subject outcome		Method of verification			
, , , , , , , , , , , , , , , , , , ,	K6_U01		He uses the terms from the field of power electronics, he can use knowledge from other modules and subjects.			[SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools			
	K6_K01		Ability to evaluate their skills and knowledge in the field of power electronics and the possibilities of various forms of self-education and further training.			[SK5] Assessment of ability to solve problems that arise in practice [SK1] Assessment of group work skills [SK2] Assessment of progress of work			
	K6_W10		Be able to use criteria for evaluating power quality, distinguish applications the types of power electronic systems.			[SW1] Assessment of factual knowledge			
	K6_U08		Understands the operation of basic power electronic circuits. Be able to select components for rectifiers and for basic pulse circuits. Be able to determine the correctness of a design. Be able to develop design documentation.			[SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools			
	K6_W03		Be able to perform elementary analysis of basic power electronic circuits. Be able to determine the exposure of power electronic circuit elements.		[SW1] Assessment of factual knowledge				

Subject contents	The meaning of power electronics within modern electrical engineering. Power electronics devices constructional features, operating principle and characteristics, thermal model. Diode rectifier operating principle, properties, interpretation the manufacturers data sheet. A multi-pulse diode rectifiers. A review of thyristors-based converters. Introduction to the fundamentals of the theory of modulation applied to power converters systems. DC-DC switched-mode converters. The single-phase voltage source inverter with square-wave output. Three-phase full-bridge inverter, the space vector modulation technique. PWM rectifiers, power factor corrections. Uninterruptible power supply solutions. Resonant-mode converters. Multilevel inverters. Electromagnetic compatibility. Practical converter design considerations: snubber circuits, drive circuits, design of magnetic components.						
Prerequisites and co-requisites	General knowledge of electrical engineering, electronics, circuit theory . Ability to analyse electrical circuits in transient states.						
Assessment methods	Subject passing criteria	Passing threshold	Percentage of the final grade				
and criteria	test of accounting exercises	60.0%	30.0%				
	exam	60.0%	40.0%				
	assessment of laboratory	60.0%	30.0%

Example issues/ example questions/ tasks being completed	 Voltage pulse is periodically fed to the input of ideal low-pass filter. It's rms value is E2. What is the mean of the voltage at the output of this filter? Draw a diagram of a three-phase diode bridge rectifier coupled with the output LC filter and the resistance R as load. Assuming that the filter gets the smooth current with value J, draw three waveforms of currents: the currents in the two diodes of one of the branches of the bridge and the input current from the power supply. Transformerless DC-DC boost type converter is operating in continuous mode. This system is powered from 5V, average value of the input current is 0.2 A at an output voltage of 12V. In the converter is used the MOSFET transistor with RDS (ON) = 50m. Estimate the conduction losses in the transistor assuming that the ripple current in the inductor are negligible. 						
Work placement	Not applicable
