

Subject card

Subject name and code	Automatics of industrial process, PG_00059838						
Field of study	Automation, Robotics and Control Systems						
Date of commencement of studies	February 2024	Academic year of realisation of subject			2024/2025		
Education level	second-cycle studies	Subject group					
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	3	ECTS credits			2.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Control Engineering -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Jacek Zawalich				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	15.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		0.0		0.0	30
Subject objectives	The aim of the course is to provide theoretical and practical knowledge in the field of designing automated technological processes in industrial conditions with the use of professional computer hardware and engineering software.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	K7_U09	The student is able to make a critical analysis of the functioning of control and regulation systems. Can make a preliminary economic analysis of undertaken engineering activities.			[SU5] Assessment of ability to present the results of task [SU1] Assessment of task fulfilment		
	K7_K05	The student is aware of the role of man in the economy and industrial production. He makes responsible decisions taking into account market requirements and the needs of the company.			[SK5] Assessment of ability to solve problems that arise in practice		
	K7_K04	The student is able to check the operation of automatic industrial process control systems and react properly in abnormal and emergency conditions, taking into account the life and health hazards.			[SK5] Assessment of ability to solve problems that arise in practice [SK3] Assessment of ability to organize work		
	K7_U08	The student recognizes and describes the occurring threats from devices and control systems. The student designs technical systems containing appropriate security systems.			[SU3] Assessment of ability to use knowledge gained from the subject [SU1] Assessment of task fulfilment		
	K7_W10	The student formulates the assumptions, goals and requirements of drive systems operating in systems and systems for controlling objects and industrial processes.			[SW3] Assessment of knowledge contained in written work and projects		
	K7_W07	Student identifies threats in complex control systems, defines methods of information protection in computer systems.			[SW3] Assessment of knowledge contained in written work and projects		

Subject contents	Examples of industrial processes, formulating aims and tasks for industrial process control systems and technical problems in their implementation. Types and ways of describing selected objects and technical processes, their specific properties as well as static and dynamic characteristics. Control structures: open and closed systems, systems with feedback from output values and from the process status, with a reference model, with a status estimator. Types of industrial control devices: continuous PID controllers, two-position and three-position controllers with correction, stepper, fuzzy and predictive controllers. Selection of control, measuring and executive devices. Designing industrial process control systems using PLC controllers.		
Prerequisites and co-requisites	Knowledge of the subject Basics of Automation		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Project	100.0%	40.0%
	Lecture	50.0%	60.0%
