GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	Energy microgrids, PG_00057269		
Field of study	Power Engineering		
Date of commencement of studies	February 2024	Academic year of realisation of subject	2024/2025
Education level	second-cycle studies	Subject group	Optional subject group Subject group related to scientific research in the field of study
Mode of study	Full-time studies	Mode of delivery	at the university
Year of study	1	Language of instruction	Polish
Semester of study	2	ECTS credits	3.0
Learning profile	general academic profile	Assessment form	exam
Conducting unit	Department of Electrical Power Engineering -> Faculty of Electrical and Control Engineering		
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Krzysztof Dobrzyński	
	Teachers	dr inż. Krzysztof Dobrzyński	

Lesson types and methods of instruction

Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
Number of study hours	30.0	0.0	15.0	0.0	0.0	45

E-learning hours included: 0.0

Learning activity and number of study hours

Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
Number of study hours	45	7.0	23.0	75

Subject objectives

Acquiring knowledge and skills in the field of operation and control of microgrids.

Learning outcomes

Course outcome	Subject outcome	Method of verification
[K7_W10] knows the basic installations of advanced energy systems, transmission networks and internal installations and their impact on the environment	The student knows the principles of functioning of microgrids in cooperation with power systems.	[SW1] Assessment of factual knowledge
[K7_U06] is able to apply basic and advanced knowledge of power equipment and transmission network and internal installations to the preliminary design of a modern power plant or part thereof	The student knows the principle of operation and design of photovoltaic systems.	[SU2] Assessment of ability to analyse information
[K7_U02] is able to use known mathematical and numerical methods to analyze and design elements, systems and power transmission networks and internal installations	The student analyzes the conditions of cooperation between microgrids and power systems.	[SU3] Assessment of ability to use knowledge gained from the subject

Subject contents

Microgrids operating in low voltage networks. Parallel and island operation conditions. Photovoltaic systems. Electric vehicle charging systems. Integration with the power system. Design and control. Means of protection against electric shock in low-voltage power devices.

LABORATORY Familiarization with the software. Preparation of device databases. Fundamentals of project creation and system commissioning. Analysis of the operation of systems in various work configurations. Discussion of the obtained results.

Prerequisites and co-requisites

Fundamentals of electrical engineering.

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Grade from the laboratory	60.0%	50.0%
	Written exam	60.0%	50.0%
