

Subject card

Subject name and code	Control of Processes in Electrical Power Engineering, PG_00042318						
Field of study	Electrical Engineering						
Date of commencement of studies	October 2023	Academic year of realisation of subject			2023/2024		
Education level	second-cycle studies	Subject group					
Mode of study	Part-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Electrical Power Engineering -> Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Robert Małkowski				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	10.0	10.0	0.0	0.0	0.0	20
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	20		7.0		48.0	75
Subject objectives	Knowledge related to regulatory processes occurring in the power system.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	K7_U02	Depending on the amount of students, students prepares a multimedia presentation			[SU2] Assessment of ability to analyse information		
	K7_U03	A student sees the importance of broadening his/her individual knowledge and skills concerning related fields.			[SU3] Assessment of ability to use knowledge gained from the subject		
	K7_W01	Student Explains regulation processes in Power grid in normal work state and after disturbance. Describes controllers used to maintain correct operation of power grid. Chooses correct operation algorithms for those controllers. Calculates chosen operation parameters of power grid with simplifying assumptions taken to consideration.			[SK2] Assessment of progress of work		
	K7_W02	Student Explains regulation processes in Power grid in normal work state and after disturbance. Calculates chosen operation parameters of power grid with simplifying assumptions taken to consideration. On the base of the basic mathematical relations students can describe fundamental elements of power system			[SW1] Assessment of factual knowledge		

Subject contents	<p>LECTURES: Generator as a regulated object. Generator controllers, limits of operation points for synchronic generators. Influence of automatic control of a tap changing step-up transformer on power capability area of generating unit. Connecting electric power subsystems to parallel running after system breakdown. Defining limits of critical parameters. Relations between basic electric parameters in power grid. Protective Automatic : under-frequency load shedding systems, under-voltage load shedding systems.</p> <p>CLASSES: Coupling parameters of simple power grid model elements( generators, transformers, power lines ) to conduct research including various load level in modelled power grid. Calculating load flow. Characterizing dependencies of voltage and/or transformer tap controllers on voltage levels and load flow in analysed grid.</p>			
Prerequisites and co-requisites	Knowledge of basic electrotechnics Knowledge of basic electrical machinery Knowledge of basic electroenergetics			
Assessment methods and criteria	Subject passing criteria		Passing threshold	Percentage of the final grade
	Midterm colloquium		50.0%	100.0%

	eResources addresses	Adresy na platformie eNauczanie:		
Example issues/ example questions/ tasks being completed	<p>1. Describe example waveforms (figure below) of switching currents for the case of synchronization with failure to meet the voltage equality condition.</p> <p>2. List the terms of cooperation of a parallel group of generators. Describe the consequences of not meeting these conditions.</p>			
Work placement	Not applicable
