

Subject card

Subject name and code	Optimization methods, PG_00021010						
Field of study	Technical Physics						
Date of commencement of studies	October 2021		Academic year of realisation of subject		2023/2024		
Education level	first-cycle studies		Subject group				
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	3		Language of instruction		Polish		
Semester of study	6		ECTS credits		5.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Theoretical Physics and Quantum Information -> Faculty of Applied Physics and Mathematics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr Maciej Kuna				
	Teachers		dr hab. Jan Franz				
			dr Maciej Kuna				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	30.0	0.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		0.0		0.0	60
Subject objectives	The aim of the lecture is to present classical and machine learning inspired optimization methods to allow quick implementation them in the form of appropriate algorithms. There are discussed in the lecture modern optimizing algorithms with an emphasis on their inspiration in physics and biology.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	K6_U07		The student is able to present the areas of application of optimization methods in physical sciences.		[SU5] Assessment of ability to present the results of task [SU2] Assessment of ability to analyse information		
	K6_W02		The student has ordered knowledge related to the use of optimization methods in the field of physics.		[SW3] Assessment of knowledge contained in written work and projects		
	K6_U08		The student has the ability to prepare an oral presentation, presenting modern optimization algorithms used in physics.		[SU5] Assessment of ability to present the results of task [SU4] Assessment of ability to use methods and tools		
Subject contents	Mathematical foundations of optimization. Numerical linear algebra. Vector norms, operations on vectors and matrices. Mathematical analysis. Conditions of existence of extremes of functions of one and many variables and methods of their checking. Methods of finding derivatives. Classic optimization methods. Algorithms for optimizing functions of one variable: dividing the interval into half, golden ratio, Fibonacci, Newton-Raphson and secant method. Algorithms for optimization of multivariable functions: cubic interpolation, Nelder-Mead, conjugate directions, Cauchy, Newton. Optimization issues in machine learning: Linear regression, simple gradient regression, polynomial regression, regularized linear models, logistic regression, linear and non-linear SVM regression, decision trees, team learning, including random forests, dimensionality reduction, deep neural network training.						
Prerequisites and co-requisites							
Assessment methods and criteria	Subject passing criteria		Passing threshold		Percentage of the final grade		
	Test		50.0%		20.0%		
	Positive completion of laboratories		50.0%		60.0%		
	Written exam		50.0%		20.0%
