

Subject card

Subject name and code	Topological data analysis, PG_00051783						
Field of study	Mathematics						
Date of commencement of studies	October 2022		Academic year of realisation of subject		2023/2024		
Education level	second-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	4		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Zakład Równań Różniczkowych i Zastosowań Matematyki -> Instytut Matematyki Stosowanej -> Faculty of Applied Physics and Mathematics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. Paweł Pilarczyk				
	Teachers		Michał Palczewski dr hab. Paweł Pilarczyk				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	15.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		5.0		10.0	75
Subject objectives	Getting familiar with mathematical foundations and software techniques for computational topology and topological data analysis, as well as with examples of applications in selected areas of science.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	K7_U13		Can apply selected software tools for topological computations. Can describe and explain selected topics and methods of computational topology and data analysis.		[SU5] Assessment of ability to present the results of task [SU1] Assessment of task fulfilment		
	K7_W11		Knows selected terminology and mathematical foundations of computational topology and topological data analysis.		[SW1] Assessment of factual knowledge		

Subject contents	<p>Lecture:</p> <p>Basic ideas of computational topology. Simplicial and cubical complexes. Definition and algorithms for the computation of homology. Homomorphisms induced in homology. Čech complexes and Vietoris-Rips complexes. Persistent homology and algorithms for its computation. Persistence diagrams. Software for the computation of simplicial and cubical homology, as well as persistent homology. Distance between persistence diagrams. Persistence landscapes, silhouettes, and images. Topological analysis of time series. Mapper - a topological algorithm for data exploration. Topological analysis of dynamical systems.</p> <p>Laboratory:</p> <p>The CHomP software for homology computation. Comparison of homology with integer coefficients against homology with coefficients in the field \mathbb{Z}_p. Approximation of subsets of \mathbb{R}^n with cubical sets. Software for persistent homology computation, including Dionysus, Ripser, Persim. Barcodes. Practical computation of Gromov-Hausdorff distance. Computation of the bottleneck distance and the Wasserstein distance between persistence diagrams. Practical construction of persistence landscapes. Topological data analysis with the GUDHI software.</p> <p>Project:</p> <p>Becoming familiar with specific methods and applications of topological data analysis, based upon selected scientific literature (papers in international academic journals), for example, regarding topological analysis of biological data.</p>														
Prerequisites and co-requisites	<p>Ability to write simple computer programs in Python and in R.</p> <p>Basic knowledge of algebraic topology.</p> <p>Familiarity with basic terminology and methods in data science.</p>														
Assessment methods and criteria	<table><tr><th>Subject passing criteria</th><th>Passing threshold</th><th>Percentage of the final grade</th></tr><tr><td>group projects</td><td>60.0%</td><td>30.0%</td></tr><tr><td>10-minute-long quizzes during lectures</td><td>60.0%</td><td>40.0%</td></tr><tr><td>laboratory exercises every week</td><td>60.0%</td><td>30.0%</td></tr></table>			Subject passing criteria	Passing threshold	Percentage of the final grade	group projects	60.0%	30.0%	10-minute-long quizzes during lectures	60.0%	40.0%	laboratory exercises every week	60.0%	30.0%
Subject passing criteria	Passing threshold	Percentage of the final grade													
group projects	60.0%	30.0%													
10-minute-long quizzes during lectures	60.0%	40.0%													
laboratory exercises every week	60.0%	30.0%
