

Subject card

Subject name and code	Topological data analysis, PG_00051783						
Field of study	Mathematics						
Date of commencement of studies	October 2022	Academic year of realisation of subject			2023/2024		
Education level	second-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	4	ECTS credits			3.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Zakład Równań Różniczkowych i Zastosowań Matematyki -> Instytut Matematyki Stosowanej -> Faculty of Applied Physics and Mathematics						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. Paweł Pilarczyk					
	Teachers	Michał Palczewski dr hab. Paweł Pilarczyk					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	15.0	15.0	0.0	60
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	60		5.0		10.0	75
Subject objectives	Getting familiar with mathematical foundations and software techniques for computational topology and topological data analysis, as well as with examples of applications in selected areas of science.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	K7_U13	Can apply selected software tools for topological computations. Can describe and explain selected topics and methods of computational topology and data analysis.			[SU5] Assessment of ability to present the results of task [SU1] Assessment of task fulfilment		
	K7_W11	Knows selected terminology and mathematical foundations of computational topology and topological data analysis.			[SW1] Assessment of factual knowledge		

Subject contents	<p>Lecture:</p> <p>Basic ideas of computational topology. Simplicial and cubical complexes. Definition and algorithms for the computation of homology. Homomorphisms induced in homology. Čech complexes and Vietoris-Rips complexes. Persistent homology and algorithms for its computation. Persistence diagrams. Software for the computation of simplicial and cubical homology, as well as persistent homology. Distance between persistence diagrams. Persistence landscapes, silhouettes, and images. Topological analysis of time series. Mapper - a topological algorithm for data exploration. Topological analysis of dynamical systems.</p> <p>Laboratory:</p> <p>The CHomP software for homology computation. Comparison of homology with integer coefficients against homology with coefficients in the field \mathbb{Z}_p. Approximation of subsets of \mathbb{R}^n with cubical sets. Software for persistent homology computation, including Dionysus, Ripser, Persim. Barcodes. Practical computation of Gromov-Hausdorff distance. Computation of the bottleneck distance and the Wasserstein distance between persistence diagrams. Practical construction of persistence landscapes. Topological data analysis with the GUDHI software.</p> <p>Project:</p> <p>Becoming familiar with specific methods and applications of topological data analysis, based upon selected scientific literature (papers in international academic journals), for example, regarding topological analysis of biological data.</p>														
Prerequisites and co-requisites	<p>Ability to write simple computer programs in Python and in R.</p> <p>Basic knowledge of algebraic topology.</p> <p>Familiarity with basic terminology and methods in data science.</p>														
Assessment methods and criteria	<table border="1" data-bbox="448 1077 1487 1238"> <thead> <tr> <th data-bbox="448 1077 794 1115">Subject passing criteria</th> <th data-bbox="794 1077 1141 1115">Passing threshold</th> <th data-bbox="1141 1077 1487 1115">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="448 1115 794 1146">group projects</td> <td data-bbox="794 1115 1141 1146">60.0%</td> <td data-bbox="1141 1115 1487 1146">30.0%</td> </tr> <tr> <td data-bbox="448 1146 794 1200">10-minute-long quizzes during lectures</td> <td data-bbox="794 1146 1141 1200">60.0%</td> <td data-bbox="1141 1146 1487 1200">40.0%</td> </tr> <tr> <td data-bbox="448 1200 794 1238">laboratory exercises every week</td> <td data-bbox="794 1200 1141 1238">60.0%</td> <td data-bbox="1141 1200 1487 1238">30.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	group projects	60.0%	30.0%	10-minute-long quizzes during lectures	60.0%	40.0%	laboratory exercises every week	60.0%	30.0%
Subject passing criteria	Passing threshold	Percentage of the final grade													
group projects	60.0%	30.0%													
10-minute-long quizzes during lectures	60.0%	40.0%													
laboratory exercises every week	60.0%	30.0%

Example issues/ example questions/ tasks being completed	Definition of elementary cubes, cubical sets, cubical chain complexes, and cubical homology. What is the homology of two torii that touch each other in one point? Definition of persistent homology of a point cloud in \mathbb{R}^n . How does one define the distance between two persistence diagrams?
Work placement	Not applicable
