

Subject card

Subject name and code	Numerical methods in the LabVIEW environment , PG_00057513						
Field of study	Nanotechnology						
Date of commencement of studies	February 2024	Academic year of realisation of subject			2023/2024		
Education level	second-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	1	ECTS credits			2.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Institute of Nanotechnology and Materials Engineering -> Faculty of Applied Physics and Mathematics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Marek Chmielewski				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	30.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		2.0		3.0	50
Subject objectives	The aim of the course is to prepare students to effectively use LabVIEW environment used as a tool for advanced digital signal processing						
Learning outcomes	Course outcome		Subject outcome			Method of verification	
	K7_U05						
	K7_U03						
	K7_W05		The student is able to design computational algorithms and implement them directly in the programming environment. He/she can use tools from the Advanced Signal Analyzer package in LabVIEW. The student can effectively scale models of digital computing algorithms.			[SW1] Assessment of factual knowledge	
Subject contents	The course contents include a comprehensive use of the LabVIEW package in the field of wide-area digital signal analysis. Methods of digital signal filtering, techniques of effective interpolation and extrapolation will be presented and tested. Activities in the field of mathematical processing of digital signals including integration and differentiation procedures, filtering using the Fourier transform and wavelet analysis, also in the time domain. Techniques for parameterization of noise signals will be presented.						
Prerequisites and co-requisites	Basic knowledge of LabVIEW programming environment						
Assessment methods and criteria	Subject passing criteria		Passing threshold		Percentage of the final grade		
	Projets in LV		100.0%		100.0%		
Recommended reading	Basic literature		Website www.NI.com				
			"Introduction to digital signal processing" Author: Lyons Richard G.				
	Supplementary literature		non				
	eResources addresses		Adresy na platformie eNauczanie:				
Example issues/ example questions/ tasks being completed	FFT, SFFT, RMS, DC analysis						

Work placement	Not applicable
