

Subject card

Subject name and code	Dynamics of the marine environment, PG_00062657								
Field of study	Naval Architecture and Offshore Structures								
Date of commencement of studies	February 2024	Academic year of realisation of subject		2023/2024					
Education level	second-cycle studies	Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study					
Mode of study	Part-time studies	Mode of delivery		at the university					
Year of study	1	Language of instruction		Polish					
Semester of study	1	ECTS credits		4.0					
Learning profile	general academic profile	Assessment form		assessment					
Conducting unit	Institute of Ocean Engineering and Ship Technology -> Faculty of Mechanical Engineering and Ship Technology								
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Paweł Dymarski							
	Teachers								
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar			
	Number of study hours	18.0	0.0	9.0	0.0	0.0			
E-learning hours included: 0.0									
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours	Self-study	SUM			
	Number of study hours	27	5.0	68.0	100				
Subject objectives	The aim of the course is for students to master mathematical models describing the dynamics of the marine environment in order to determine (calculate) the forces acting on offshore and coastal objects such as: ships offshore facilities: - drilling rig - offshore wind turbines (OWT): -> bottom-fixed OWT structures -> floating wind turbine structures other offshore structures								
Learning outcomes	Course outcome		Subject outcome		Method of verification				
	[K7_W01] Identifies with a profound understanding the phenomena related to ocean engineering, describing advanced theories and methods for analyzing processes in technical oceanographic systems		The student knows the theories and methods of calculating phenomena related to sea waves, current and wind. Is able to calculate the impact of waves on basic ocean engineering structures (monopoles)		[SW3] Assessment of knowledge contained in written work and projects				
	[K7_U03] Formulates research challenges and selects appropriate analytical methods, leveraging advanced IT tools, then critically evaluates the obtained results		The student knows analytical methods for modeling sea waves, wind and sea currents. The student is able to analyze the results of research on the impact of waves on monopiles. The student knows analytical methods for determining the loads on a monopile structure		[SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject [SU1] Assessment of task fulfilment				
[K7_U05] Efficiently collaborates with team members both as a leader and a collaborator, achieving group goals through effective teamwork		Collaborates with team members as a leader or collaborator. Preparation of laboratory reports.		[SU5] Assessment of ability to present the results of task [SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment					

Subject contents	1. Basic equations governing the motion of fluids 2. Gravitational stability of water masses (vertical movements) 3. Progressive movement of water masses 4. Tides 5. Wave motion of the sea 5.1 Linear wave model (Airy model) 5.2 Regular wave 5.2.1 Basic quantities describing a regular wave 5.2.2 Basic properties of a regular wave. 5.3 Irregular wave 5.3.1 Sea wave record analysis. Basic concepts describing an irregular wave 5.3.2. Spatial (omnidirectional) and plane (unidirectional) irregular wave 5.3.3 General equation for irregular waves 5.3.4 Wave energy spectrum. Mathematical description of the wave spectrum 5.3.5 Determination of irregular wave parameters based on the wave spectrum 5.3.6 Determining the irregular wave equation from the wave spectrum. 5.4 Higher order wave models 6. Wind 6.1 Laws governing the movement of air (atmosphere) 6.2. Basic wind models (stationary approach). Velocity profile equations 6.3. Wind as a non-stationary phenomenon 6.4.1 Analysis of the recording of the velocity of air masses as a function of time 6.4.2 Wind energy spectral density function. Mathematical models of the wind energy spectrum 6.4.3 Velocity equation for unidirectional unsteady air flow 6.4.4 Complex models describing airflow 7. Impact of the marine environment on objects of simple geometry. Basic models mathematical tools for calculating hydrodynamic forces. Introduction to modeling loads on offshore structures									
Prerequisites and co-requisites	Knowledge of mathematical analysis and numerical methods: - integration: analytical and numerical methods, - trigonometric functions, - spectral analysis, Fourier series, - basic knowledge of vector algebra  Ability to use a spreadsheet, basic programming skills									
Assessment methods and criteria	<table border="1"> <thead> <tr> <th>Subject passing criteria</th><th>Passing threshold</th><th>Percentage of the final grade</th></tr> </thead> <tbody> <tr> <td>Lecture</td><td>60.0%</td><td>67.0%</td></tr> <tr> <td>Labs</td><td>70.0%</td><td>33.0%</td></tr> </tbody> </table>	Subject passing criteria	Passing threshold	Percentage of the final grade	Lecture	60.0%	67.0%	Labs	70.0%	33.0%
Subject passing criteria	Passing threshold	Percentage of the final grade								
Lecture	60.0%	67.0%								
Labs	70.0%	33.0%

Example issues/example questions/tasks being completed	Przykładowe pytania (nie pokrywają pełnego zakresu przedmiotu)  1. Napisz równanie fali regularnej. Narysuj wykres (szkic) fali w układzie x, z, oznacz na wykresie amplitudę fali i jej długość. 2. Napisz równanie fali regularnej. Narysuj wykres (szkic) fali w układzie t,z (czas, z), oznacz na wykresie amplitudę fali i jej okres. 3. Naszkicuj kształt trajektorii częstek wody na przykładzie a) akwenu głębokiego, b) akwenu o średniej głębokości oraz c) akwenu płytkego. 4. Napisz równanie fali nieregularnej. Naszkicuj przykładowy wykres fali, nanieś oznaczenia okresów piku, okresów miejsc zerowych oraz oznacz amplitudy (przykładowe). 5. Pokaż na przykładach czym się różni widmo falowania wąsko- od szerokopasmowego (szkic) 6. Wypisz znane Ci wyidealizowane funkcje widmowe falowania. Zilustruj wpływ zmiany poszczególnych parametrów na kształt widma (wykresy). 7. Naszkicuj typowy profil prędkości wiatru. Podaj wzór. 8. Wymień znane Ci typy prądów morskich, naszkicuj profile prędkości, podaj wzory. 9. Sformułuj równanie Morisona, nazwij człony równania, omów wielkości w nim występujące (w tym współczynniki). Dla jakiego typu (kształt/wielkość) konstrukcji można to równanie stosować. 10. Omów metodę Froude'a-Krylowa wyznaczania sił na obiekty offshore. Na jakim założeniu opiera się metoda F-K ? (podpowiedź: w jaki sposób wyznaczamy pole ciśnienia?) 11. Omów model p-y oddziałymania dno(grunt)-pal
