

Subject card

Subject name and code	Risk and reliability of systems, PG_00062659						
Field of study	Naval Architecture and Offshore Structures						
Date of commencement of studies	February 2024			Academic year of realisation of subject		2023/2024	
Education level	second-cycle studies			Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study	
Mode of study	Part-time studies			Mode of delivery		at the university	
Year of study	1			Language of instruction		Polish	
Semester of study	1			ECTS credits		6.0	
Learning profile	general academic profile			Assessment form		exam	
Conducting unit	Zakład Siłowni Okrętowych -> Institute of Ocean Engineering and Ship Technology -> Faculty of Mechanical Engineering and Ship Technology						
Name and surname of lecturer (lecturers)	Subject supervisor			dr inż. Jacek Rudnicki			
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	18.0	9.0	0.0	18.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		5.0		100.0	150
Subject objectives	Introducing students to methods of reliability assessment and risk analysis of technical systems.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_U05] Efficiently collaborates with team members both as a leader and a collaborator, achieving group goals through effective teamwork		The student is capable of carrying out a project task within a team of collaborators.		[SU1] Assessment of task fulfilment		
	[K7_W05] Considers in advanced analyses the technical, environmental, economic, legal, and ethical aspects related to maritime activities, demonstrating an awareness of responsibility for decisions made and fostering the development of individual entrepreneurship		The student has knowledge in the field of methods for determining the reliability and safety level of ships and the other marine constructions.		[SW1] Assessment of factual knowledge		
	[K7_K02] Is aware of their social role as a graduate of a technical institution, understanding the importance of adhering to professional ethics and respecting diverse perspectives		The student is aware of the responsibility he takes for the level of safety of the technical systems he design.		[SK5] Assessment of ability to solve problems that arise in practice		
Subject contents	LECTURE AND EXERCISES: Concept of reliability, reliability indicators, mathematical models for assessing the reliability of elements and systems. Statistical hypothesis testing. Maintainability and availability of technical systems. Human factors. Methods for assessing the probability of human errors. Concept of risk, risk measures, mathematical models for risk assessment. ALARP criterion. Formal Safety Assessment (FSA) method in shipping. Safety management. PROJECT: Risk analysis of a selected technical object.						
Prerequisites and co-requisites	Basic knowledge of the construction and operation of machines and devices.						
Assessment methods and criteria	Subject passing criteria		Passing threshold		Percentage of the final grade		
	Written test		50.0%		100.0%
