

Subject card

Subject name and code	Elements of Bioinformatics, PG_00054280						
Field of study	Informatics						
Date of commencement of studies	February 2024		Academic year of realisation of subject		2024/2025		
Education level	second-cycle studies		Subject group		Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	1		Language of instruction		Polish		
Semester of study	2		ECTS credits		2.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Algorithms and Systems Modelling -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor		prof. dr hab. inż. Krzysztof Giaro				
	Teachers		mgr inż. Krzysztof Pastuszek dr inż. Joanna Raczek prof. dr hab. inż. Krzysztof Giaro				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	15.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		5.0		15.0	50
Subject objectives	Bioinformatics is a relatively new branch of computer science whose aim is to support biological research by computers. The scope of methods used by bioinformatics is very wide: we have fast text processing, discrete optimization algorithms, statistical analysis, artificial intelligence and machine learning, computational geometry and even computational models of physical systems. This subject is devoted to presentation of selected computational problems connected with the analysis of information obtained from biological data e.g. DNA and protein sequences.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_W02] knows and understands, to an increased extent, selected laws of physics and physical phenomena, as well as methods and theories explaining the complex relationships between them, constituting advanced general knowledge in the field of technical sciences related to the field of study	The student knows the mathematical methods supporting the acquisition of information from biological sequences and uses them in practice.	[SW3] Assessment of knowledge contained in written work and projects
	[K7_U43] can apply information technologies in market economy and information society conditions as well as algorithmize and computerize cognitive and decision-making processes in other areas of knowledge	The student implements bioinformatics software for aligning two or many biological sequences, modeling their evolution or analyzing phylogenetic history.	[SU4] Assessment of ability to use methods and tools
	[K7_U02] can perform tasks related to the field of study as well as formulate and solve problems applying recent knowledge of physics and other areas of science	The student analyzes bioinformatic data using the software he creates, analyzes the obtained results, evaluates the usefulness of selected methods.	[SU4] Assessment of ability to use methods and tools
	[K7_W05] Knows and understands, to an increased extent, methods of process and function support, specific to the field of study.	The student knows the biological significance of DNA, RNA and protein sequences, understands formal models of their evolution and methods of obtaining information from such data.	[SW3] Assessment of knowledge contained in written work and projects
	[K7_U41] can select methods of modelling and analysis of information systems and applications using selected elements of theoretical computer science and modern programming tools	The student chooses from the available models, algorithms or software libraries elements useful for carrying out bioinformatic analyzes.	[SU1] Assessment of task fulfilment
Subject contents	1. Biological introduction. 2. Linear matching of two sequences. 3. Linear matching of multiple sequences. 4. Modeling the evolution of biological sequences. 5. Introduction to phylogenetics, distance methods. 6. Reading evolution history: the parsimony method. 7. Theme search, hidden Markov models.		
Prerequisites and co-requisites	Basics of: - programming - algorithms and data structures or algorithm analysis - probability calculus and statistics		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Project	52.0%	50.0%
	Midterm colloquium	44.0%	50.0%
