

Subject card

Subject name and code	Mathematics for engineers, PG_00062713						
Field of study	Technologies for Industry 5.0						
Date of commencement of studies	October 2024	Academic year of realisation of subject				2024/2025	
Education level	first-cycle studies	Subject group				Obligatory subject group in the field of study	
Mode of study	Full-time studies	Mode of delivery				at the university	
Year of study	1	Language of instruction				Polish	
Semester of study	1	ECTS credits				7.0	
Learning profile	general academic profile	Assessment form				assessment	
Conducting unit	Mathematics Center -> Vice-Rector for Education						
Name and surname of lecturer (lecturers)	Subject supervisor	dr Hanna Guze					
	Teachers	dr Hanna Guze					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	45.0	0.0	0.0	0.0	75
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	75		5.0		95.0	175
Subject objectives	Students obtain competence in using methods of mathematical analysis, linear algebra and geometry, and knowledge how to solve simple problems that are found in the field of engineering.						
Learning outcomes	Course outcome		Subject outcome			Method of verification	
	[K6_U01] applies knowledge of mathematics, physics, chemistry, IT tools and other engineering disciplines to solve theoretical, engineering and technological problems		Student combines knowledge of mathematics with knowledge from other fields. Student uses methods of mathematical description of phenomena in the physical and mechanical processes.			[SU3] Assessment of ability to use knowledge gained from the subject	
	[K6_W01] demonstrates knowledge and understanding of mathematics, physics, chemistry and IT tools at the level necessary to formulate and solve typical engineering and technological problems		Student names basic properties of elementary functions. Student defines the basic concepts of linear algebra. Student calculates determinants of any degree. Student gives a graphic interpretation of the systems of linear equations. Student examines the linear independence of vectors. Student examines the position of lines and planes in space. Student uses the basic operations on complex numbers. Student determines the real and complex roots of polynomials.			[SW1] Assessment of factual knowledge	
	[K6_K01] is aware of the need to constantly update and enrich knowledge and practical skills, and improve professional, personal and social competences		Student understands the need of lifelong learning, and is able to inspire others and organize their learning process.			[SK1] Assessment of group work skills	

Subject contents	<p>Elementary functions and their properties.</p> <p>Elements of Linear Algebra: matrices (definition, types of matrices, operations, inverse matrix), determinants (definition, properties), systems of linear equations (Cramer's rule, Kroneckera - Capelli theorem, Gaussian elimination).</p> <p>Analytic Geometry: vectors (dot product, cross product, mixed product, and their application), equations of line and planes in space.</p> <p>Trigonometric functions and their basic properties.</p> <p>Complex numbers: algebraic and trigonometric form, complex conjugate, modulus, arithmetic operations, root of complex numbers, solving equations.</p>
