

## 。 GDAŃSK UNIVERSITY OF TECHNOLOGY

## Subject card

Subject name and code	Basics of programming - algorithms and data structures, PG_00062716								
Field of study	Technologies for Industry 5.0								
Date of commencement of studies	October 2024		Academic year of realisation of subject			2024/2025			
Education level	first-cycle studies		Subject group			Obligatory subject group in the field of study			
Mode of study	Full-time studies		Mode of delivery			at the university			
Year of study	1		Language of instruction			Polish			
Semester of study	1		ECTS credits			6.0			
Learning profile	general academic profile		Assessment form			assessment			
Conducting unit	Department of Biomedical Engineering -> Faculty of Electronics, Telecommunications and Informatics								
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Grzegorz Jasiński						
	Teachers	dr inż. Grzegorz Jasiński							
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Projec	t	Seminar	SUM	
	Number of study hours	30.0	0.0	30.0	0.0		0.0	60	
	E-learning hours included: 0.0								
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study S		SUM	
	Number of study hours	60		5.0		85.0		150	
Subject objectives	The aim of the course is for students to acquire knowledge and skills in programming. The student should master the ability to create and analyse algorithms and the principles of programming in the C/C++ language: instructions, data types, operators and functions. Students should acquire knowledge of structures, pointers and other basic concepts related to programming in C/C++.								
Learning outcomes	Course outcome		Subject outcome			Method of verification			
	[K6_U01] applies knowledge of mathematics, physics, chemistry, IT tools and other engineering disciplines to solve theoretical, engineering and technological problems		The student programs in a procedural programming language, runs and tests programs. The student is able to analyze problems and select appropriate data models and structures data.			[SU4] Assessment of ability to use methods and tools [SU2] Assessment of ability to analyse information			
	[K6_W01] demonstrates knowledge and understanding of mathematics, physics, chemistry and IT tools at the level necessary to formulate and solve typical engineering and technological problems		The student knows basic data structures and corresponding algorithms. The student is able to write programs in C/C++ using appropriate libraries.			[SW1] Assessment of factual knowledge			
	[K6_K01] is aware of the need to constantly update and enrich knowledge and practical skills, and improve professional, personal and social competences		The student understands the need to explore and learn well-known technologies. The student is able to analyze problems and select appropriate data models and data structures. The student understands the life cycle and development of code.			[SK3] Assessment of ability to organize work [SK5] Assessment of ability to solve problems that arise in practice [SK2] Assessment of progress of work			

Subject contents           Prerequisites           and co-requisites	<ol> <li>Programming languages, alphabet, syntax and semantics. Translation.</li> <li>Classification of types. Integer and floating point types.</li> <li>Arithmetic operators and expressions.</li> <li>Selected standard functions.</li> <li>Character type. Type casting.</li> <li>Logical type. Logical operators and expressions.</li> <li>Basics of input/output.</li> <li>Conditional statements (if, switch) and conditional expression.</li> <li>Iterative instructions (for, while, do-while). Nested iterations.</li> <li>Defining types. Constant. Enum type.</li> <li>One-dimensional and multidimensional arrays. Strings.</li> <li>Validity scope and lifetime of variables</li> <li>Functions.</li> <li>Function parameters.</li> <li>Pointer type. Pointer arithmetic.</li> <li>Pointer type. Pointer arithmetic.</li> <li>Pointer type. Pointer arithmetic.</li> <li>Pointer sin communication between functions.</li> <li>Typamic memory allocation.</li> <li>Structures</li> <li>The concept of an algorithm, differences between algorithms, the influence of the model on the solution, representation of algorithms, correctness analysis.</li> <li>Examples of recursive and iterative solutions.</li> <li>Examples of recursive and iterative solutions.</li> <li>Examples of recursive divide and conquer solutions.</li> <li>Basic data structures: list, queue, stack and methods of their implementation.</li> <li>Basic sorting algorithms, binary search, quick sort, heap sort.</li> </ol>							
Assessment methods	Subject passing criteria	Passing threshold	Percentage of the final grade					
and criteria	Lab	50.0%	50.0%					
	Lecture	50.0%	50.0%
