

Subject card

Subject name and code	Script languages, PG_00062720						
Field of study	Technologies for Industry 5.0						
Date of commencement of studies	October 2024	Academic year of realisation of subject				2024/2025	
Education level	first-cycle studies	Subject group				Obligatory subject group in the field of study Subject group related to scientific research in the field of study	
Mode of study	Full-time studies	Mode of delivery				at the university	
Year of study	1	Language of instruction				Polish	
Semester of study	2	ECTS credits				4.0	
Learning profile	general academic profile	Assessment form				assessment	
Conducting unit	Division of Physics of Disordered Systems -> Institute of Nanotechnology and Materials Engineering -> Faculty of Applied Physics and Mathematics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Szymon Winczewski				
	Teachers		dr inż. Szymon Winczewski				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	15.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		5.0		50.0	100
Subject objectives	The aim of the course is to familiarize students with the basics of programming. The course framework includes learning the Python language and using it to solve sample problems encountered in engineering practice.						
Learning outcomes	Course outcome		Subject outcome			Method of verification	
	[K6_W01] demonstrates knowledge and understanding of mathematics, physics, chemistry and IT tools at the level necessary to formulate and solve typical engineering and technological problems		The student knows the basics of the Python language to a degree that allows for its practical use in solving typical engineering and technological problems.			[SW1] Assessment of factual knowledge	
	[K6_K02] makes decisions independently, carries out a critical assessment of own actions and actions of managed teams, is ready to make decisions and accept responsibility for the consequences of these actions		The student can propose a solution to a given problem and present it to a group. Additionally, the student understands and accepts criticism of the solution he/she presented. The student can also critically evaluate solutions proposed by others, identify weaknesses in these solutions, and suggest ways to improve them.			[SK1] Assessment of group work skills [SK4] Assessment of communication skills, including language correctness	
	[K6_U01] applies knowledge of mathematics, physics, chemistry, IT tools and other engineering disciplines to solve theoretical, engineering and technological problems		The student is able to write programs in Python from scratch, which are used to solve selected theoretical, engineering, and technological problems.			[SU1] Assessment of task fulfilment [SU3] Assessment of ability to use knowledge gained from the subject [SU4] Assessment of ability to use methods and tools	

Subject contents	<p>Lecture:</p> <ol style="list-style-type: none"> <li>1. Introduction to programming</li> <li>2. Python language characteristics and applications</li> <li>3. Python interpreter</li> <li>4. Basics of programming in Python             <ol style="list-style-type: none"> <li>a) variables and constants, and their types</li> <li>b) basic arithmetic operations, assignment operation</li> <li>c) conditional statements</li> <li>d) loops</li> <li>e) functions</li> </ol> </li> <li>5. Lists, tuples, sequences</li> <li>6. Modules (including standard ones) and packages</li> <li>7. Reading from/writing to files</li> <li>8. Errors and exceptions</li> <li>9. Classes</li> <li>10. Modules/packages useful in engineering practice</li> </ol> <p>Laboratory:</p> <p>The laboratory involves practical use of the Python language in solving sample problems encountered in engineering practice. During the laboratory sessions, sample programs illustrating the content discussed in the lectures will be worked through. Typical programming constructs/solutions/algorithms will also be discussed. The scope of the laboratory also includes work on exemplary problems.</p> <p>Project:</p> <p>The project involves working on a given problem and solving it from scratch using a program written in Python.</p>
