

Subject card

Subject name and code	Interfaces and communication networks, PG_00062753						
Field of study	Technologies for Industry 5.0						
Date of commencement of studies	October 2024	Academic year of realisation of subject			2025/2026		
Education level	first-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	4	ECTS credits			2.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Biomedical Engineering -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Grzegorz Jasiński				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		2.0		18.0	50
Subject objectives	The aim of the subject is for students to acquire knowledge and skills related to the use of typical communication interfaces in data acquisition. Students should learn to configure, physically connect and test the operation of selected wired and wireless communication standards.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_W05] demonstrates practical knowledge related to technological processes, utilized devices and systems, has knowledge regarding selected processes monitoring tools	The student explains the meaning of basic concepts related to topology and functioning of interfaces. The student explains the basic differences between different interfaces. The student will identify and explain the basic considerations for the design and use of data acquisition systems. The student selects data acquisition systems depending on the application.			[SW3] Assessment of knowledge contained in written work and projects [SW1] Assessment of factual knowledge		
	[K6_U05] interprets phenomena occurring around the technological process and processes occurring in the life cycle of devices and systems, makes a critical assessment of the functioning of existing solutions	The student tests the operation of selected data exchange interfaces. The student builds and configures selected data acquisition and exchange systems.			[SU3] Assessment of ability to use knowledge gained from the subject [SU2] Assessment of ability to analyse information		
Subject contents	Concept of interface and communication protocol. Types of interfaces. Basic concepts of data transmission. Computer networks, Layered network architectures. Data link layer design problems (synchronisation, flow control, error detection). Ethernet networks. RS232, RS485, CAN and 1-Wire serial interfaces. GPIB parallel interface. SCPI, Modbus communication protocols. Bluetooth and Zigbee wireless interfaces.						
Prerequisites and co-requisites							
Assessment methods and criteria	Subject passing criteria		Passing threshold		Percentage of the final grade		
	Laboratory practical exercises		50.0%		30.0%		
	Written test		50.0%		70.0%
