

## Subject card

Subject name and code	Analytical measurement techniques, PG_00062760						
Field of study	Technologies for Industry 5.0						
Date of commencement of studies	October 2024		Academic year of realisation of subject		2025/2026		
Education level	first-cycle studies		Subject group		Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	4		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		exam		
Conducting unit	Division of Electrochemistry and Surface Physical Chemistry -> Institute of Nanotechnology and Materials Engineering -> Faculty of Applied Physics and Mathematics						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Marta Przeźniak-Welenc				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	15.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		5.0		40.0	75
Subject objectives	The aim of the course is to familiarize students with the basics and advanced analytical techniques used in industry.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_W03] demonstrates knowledge on materials used in industrial technologies, their structure and fabrication, knows the principles of conducting research, analyzing it and creating technical documentation		The student demonstrates knowledge of materials used in industrial technologies, their structure and manufacturing processes, as well as an understanding of research methods, data analysis, and technical documentation creation.		[SW1] Assessment of factual knowledge		
	[K6_U03] has the ability to plan, prepare and carry out engineering activities using practical knowledge and understanding of the specificity of materials, devices and tools, processes and technologies, and prepare a substantive report		The student is able to plan, prepare, and execute engineering activities using practical knowledge and understanding of the specifics of materials, equipment, and tools, processes and technologies, and to prepare a substantive report.		[SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment		

Subject contents	<p><b>Lecture 1 (1h): The Role and Tasks of Analytical Techniques in Industry</b></p> <p><b>Lecture 2 (1h): Basic Concepts</b> (qualitative analysis, quantitative analysis, LOD, LOQ, at-line analysis system, in-line, on-line, off-line)</p> <p><b>Lecture 3 (1h): Types of Samples and Analytical Techniques</b> (classical and instrumental methods, sample states)</p> <p><b>Lecture 4 (1h): Introduction to Instrumental Analysis Methods</b></p> <p><b>Lecture 5 (1h): Electroanalytical Methods</b> (potentiometry, pH-metry, conductometry)</p> <p><b>Lecture 6-7 (2h): Spectroscopic Methods UV-Vis and IR</b></p> <p><b>Lecture 8-9 (2h): Atomic Spectroscopy</b> (ICP-OES, AES)</p> <p><b>Lecture 10 (1h): Introduction to Chromatographic Methods</b></p> <p><b>Lecture 11 (1h): Liquid Chromatography (LC) and Ion Chromatography (IC)</b></p> <p><b>Lecture 12-13 (2h): Coupled Techniques GC-MS, LC-MS</b></p> <p><b>Lecture 14 (1h): Quality Control in Production and Good Laboratory Practice (GLP)</b></p> <p><b>Lecture 15 (1h): Summary and Discussion</b></p>		
Prerequisites and co-requisites	Basic knowledge of general chemistry.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Written egzam	50.0%	100.0%
Recommended reading	Basic literature	P. Konieczka i inni, Ocena i kontrola jakości wyników analitycznych, Gdańsk 2004.	
		J. Namieśnik, Rola i zadania chemii analitycznej w zakresie technologii chemicznej, Przemysł	
		Chemiczny, 94/2, 2015.	
	Supplementary literature	Metody spektroskopowe w chemii analitycznej, A Cygański	
	eResources addresses	Adresy na platformie eNauczanie:	

<p>Example issues/ example questions/ tasks being completed</p>	<p><b>Sample Topics:</b></p> <ul style="list-style-type: none"> <li>• Definitions of qualitative and quantitative analysis.</li> <li>• Differences between LOD (Limit of Detection) and LOQ (Limit of Quantitation).</li> <li>• Types of analytical systems: off-line, at-line, on-line, in-line.</li> <li>• Methods of Instrumental Analysis <ul style="list-style-type: none"> <li>• Classification of instrumental analysis methods: electroanalytical, spectroscopic, chromatographic.</li> <li>• Basic principles of electroanalytical, spectroscopic, and chromatographic methods.</li> <li>• Spectroscopic methods: UV-Vis, IR, atomic spectroscopy (ICP-OES, AES).</li> <li>• Chromatographic methods: gas chromatography (GC), liquid chromatography (LC), ion chromatography (IC).</li> <li>• Combined techniques: GC-MS, LC-MS.</li> </ul> </li> </ul> <p><b>Sample Questions:</b></p> <ul style="list-style-type: none"> <li>• What are the main differences between qualitative and quantitative analysis?</li> <li>• What do LOD and LOQ mean, and how do they affect the results of an analysis?</li> <li>• What are the advantages and disadvantages of different types of analytical systems: off-line, at-line, on-line, in-line?</li> <li>• What are the basic principles of electroanalytical methods, such as pH-metry and conductometry?</li> <li>• How does UV-Vis spectroscopy differ from IR spectroscopy in terms of applications and techniques?</li> </ul>
<p>Work placement</p>	<p>Not applicable</p>
