

Subject card

Subject name and code	Wireless communication topics, PG_00062754						
Field of study	Technologies for Industry 5.0						
Date of commencement of studies	October 2024	Academic year of realisation of subject			2025/2026		
Education level	first-cycle studies	Subject group			Optional subject group Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	4	ECTS credits			4.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Department of Microwave and Antenna Engineering -> Faculty of Electronics, Telecommunications and Informatics						
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Piotr Kowalczyk					
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	15.0	15.0	0.0	0.0	45
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	45		5.0		50.0	100
Subject objectives	The aim of the course is to introduce to wireless communication topics, taking into account the basic physical phenomena related to radio waves propagation, the basic components used in wireless systems together with their parameters, which will allow course participants to set up and deploy wireless links.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_W03] demonstrates knowledge on materials used in industrial technologies, their structure and fabrication, knows the principles of conducting research, analyzing it and creating technical documentation	The student will become familiar with basic issues related to the propagation of radio waves and the parameters of waveguides, components, and systems used in wireless communication.			[SW1] Assessment of factual knowledge		
	[K6_U03] has the ability to plan, prepare and carry out engineering activities using practical knowledge and understanding of the specificity of materials, devices and tools, processes and technologies, and prepare a substantive report	The student can analyze radio waves and determine the basic parameters of wireless communication links to select appropriate link components.			[SU3] Assessment of ability to use knowledge gained from the subject		

Subject contents	<ol style="list-style-type: none"> 1. Plane wave: basic parameters and effects 2. Propagation media: Impedance and reflection from the interface between two media 3. Plane wave oblique incidence at the Interface between two media 4. Standing wave coefficient and reflection coefficient, multi-layer media 5. Matching of the two media: impedance transformers 6. Coaxial and microstrip transmission lines: basic parameters 7. Scattering matrix and basic types of passive components 8. Antenna types and their basic parameters 9. Wireless systems and basic parameters of wireless communication devices 10. Propagation in real environments of wireless system installations and range equation <p>667 / 5 000</p> <p>Plane Wave: Basic Parameters and Effects Media Impedance and Reflection from the Interface of Two Media Oblique Incidence of a Plane Wave at the Interface of Two and Multilayer Media Standing Wave Coefficient and Reflection Coefficient Matching Two Media: Impedance Transformers Coaxial and Microstrip Transmission Lines: Basic Parameters Scattering Matrix and Basic Passive Components Types of Antennas and Their Basic Parameters Wireless Systems and Basic Parameters of Wireless Communication Devices and Range Equation Propagation in Real Environments of Wireless System Installations</p>		
Prerequisites and co-requisites	Basic knowledge of mathematics, electronics, electricity and magnetism.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Laboratory points	50.0%	50.0%
	Tests	50.0%	50.0%
Recommended reading	Basic literature		<p>P. Kowalczyk, R. Lech, W. Zieniutycz: "Pola i Fale Elektromagnetyczne w Zadaniach", Wydawnictwo Politechniki Gdanskiej, Gdansk 2015; ISBN 978-83-7348-626-3</p> <p>P. Kowalczyk, R. Lech, J. Mazur: "Technika Wysokich Częstotliwości w Zadaniach", Wydawnictwo Politechniki Gdanskiej, Gdansk 2022; ISBN 978-83-7348-859-5</p>
	Supplementary literature		D.Pozar: "Microwave engineering", Willey&Sons, 1998
