

Subject card

Subject name and code	, PG_00062840						
Field of study	Civil Engineering						
Date of commencement of studies	October 2022		Academic year of realisation of subject		2023/2024		
Education level	first-cycle studies		Subject group		Optional subject group		
Mode of study	Full-time studies		Mode of delivery		at the university		
Year of study	2		Language of instruction		Polish		
Semester of study	4		ECTS credits		3.0		
Learning profile	general academic profile		Assessment form		assessment		
Conducting unit	Department of Structural Mechanics -> Faculty of Civil and Environmental Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Mateusz Sondej				
	Teachers		dr hab. inż. Agnieszka Tomaszewska dr inż. Mateusz Sondej				
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	0.0	0.0	30.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		0.0		0.0	30
Subject objectives	The aim of the course is to broaden the knowledge of the theory of building structures and to verify the theory by means of experimental research. The aim of the course is also to engage students in designing and performing experiments on their own.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K6_U05] Conducts research (obtaining information, simulations, experimental methods) in the field of construction in order to solve specific tasks and report research results.		The student conducts experimental research in the field of construction in order to solve specific tasks and report research results.		[SU5] Assessment of ability to present the results of task		
	[K6_K02] Can work effectively in a group, as well as function in teams, which may consist of representatives of various branches and levels.		The student is able to work effectively in a group, as well as function in teams, which may consist of representatives of different industries and levels.		[SK1] Assessment of group work skills		
	[K6_K03] Can effectively, clearly and unambiguously convey information, describe activities and communicate their results/ outcomes to engineers or a wider audience using appropriate communication methods and tools.		The student is able to effectively, clearly and unambiguously convey information, describe activities and communicate their outcomes/ outcomes to engineers or a wider audience using appropriate communication methods and tools.		[SK5] Assessment of ability to solve problems that arise in practice		
	[K6_W05] Demonstrate knowledge and understanding of research methods (obtaining information, simulations, experimental methods) in the field of civil engineering.		The student demonstrates knowledge and understanding of research methods (information acquisition, simulations, experimental methods) in the field of construction		[SW3] Assessment of knowledge contained in written work and projects		
Subject contents	1. Identification of tension zones of member systems,2. Identification of static diagrams of structures,3. Analysis of statics and spatial stability of truss structure,4. Design and construction of lattice structure,5. Composite and multiple beam,6. Glued and screwed connection of structural elements,7. Load-bearing capacity of fasteners of structural elements,8. Statics of the retaining wall,9. Investigation of the phenomenon of jumping of the structure to a different equilibrium position,10. Reactions						
Prerequisites and co-requisites	Completion of courses: General Mechanics (BSP012), Strength of Materials (BSP015). Course implementation:Structural Mechanics (BSP020).						

Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	test	0.0%	100.0%
