

Subject card

Subject name and code	, PG_00060395						
Field of study	Spatial Development						
Date of commencement of studies	October 2023	Academic year of realisation of subject			2023/2024		
Education level	first-cycle studies	Subject group					
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	2	ECTS credits			1.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Department of Urban Design and Regional Planning -> Faculty of Architecture						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. Natalia Sokół					
	Teachers	dr inż. Natalia Sokół					
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	0.0	15.0	0.0	0.0	0.0	15
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM		
	Number of study hours	15	0.0	0.0	15		
Subject objectives	Familiarizing students with the issues of water dominance areas on the example of the Vistula Delta areas (Nowy Dwór Gdański along the Tuga River, Olszynka district in Gdańsk near the Oplýv Motława). Thanks to introductory lectures, students will understand the environmental conditions of the Vistula Delta area on scales -macro, -meso and micro.						
Learning outcomes	Course outcome	Subject outcome			Method of verification		
	[K6_W04] has basic knowledge in the field of pro-ecological design and knows the principles of sustainable development of cities and regions; has knowledge of the natural foundations of spatial management and the impact of natural conditions on the processes of economic development on a local, regional and national scale	Students should be aware of the current state-of-the art and processes and trends of revitalization of water cultural landscape. The area of analysis is situated in the Vistula River Delta.			[SW1] Assessment of factual knowledge		
	[K6_U05] correctly interprets natural phenomena, and when formulating and solving engineering tasks related to spatial management, notices their systemic and non-technical aspects related to the natural environment	Students understand the influence of natural conditions on the processes of development in river delta. They understand the influence of historical and socio-cultural factors on regional development. They understand that water is the factor as danger of flooding and development potential in changing climate.			[SU4] Assessment of ability to use methods and tools [SU5] Assessment of ability to present the results of task		
Subject contents	COURSE CONTENT: - Visiting the Żuławy Historical Park in Nowy Dwór Gdański- Familiarization with the area of water dominance, its history, values and problems. - Multifaceted analysis of the functional and spatial structure of a fragment of the city located in the water/polder space.- Determination of the values and problems of water dominance space.- A proposal for a program and vision of transformation of a fragment of the city in the face of climate change, along with a working mock-up.						

Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	paper model	65.0%	15.0%
	presentation-poster	65.0%	15.0%
	program of revitalization	65.0%	50.0%
	SWOT analysis	65.0%	20.0%
