

Subject card

Subject name and code	Architectural and Urban Theories in Revitalisation Process, PG_00057050						
Field of study	Architecture						
Date of commencement of studies	October 2024	Academic year of realisation of subject			2024/2025		
Education level	second-cycle studies	Subject group			Obligatory subject group in the field of study Subject group related to scientific research in the field of study		
Mode of study	Full-time studies	Mode of delivery			at the university		
Year of study	1	Language of instruction			Polish		
Semester of study	1	ECTS credits			2.0		
Learning profile	general academic profile	Assessment form			exam		
Conducting unit	Department of Residential Architecture -> Faculty of Architecture						
Name and surname of lecturer (lecturers)	Subject supervisor	dr inż. arch. Ksenia Piątkowska					
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	30.0	0.0	0.0	0.0	0.0	30
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	30		2.0		18.0	50
Subject objectives	The aim is to discuss the architectural revitalization of objects, complexes of buildings in relation to contemporary architectural and conservation theories in Europe and worldwide. The report is based on examples of revitalization of buildings with different architecture, original function, scale, in different urban-socio-economic conditions. Each of the examples explains the reason for undertaking revitalization activities, their intended purpose, instruments that were used expecting to achieve the planned effects and the final result of the activities carried out.						

Learning outcomes	Course outcome	Subject outcome	Method of verification
	[K7_W03] knows and understands the history and theory of architecture as well as art, technology and humanities to the extent necessary for the proper performance of architectural designs; advanced issues related to architecture and urban planning useful for designing architectural objects and urban complexes in the social, cultural, natural, historical, economic, legal context and other non-technical conditions of engineering activities, integrating knowledge acquired during studies	knows various conservation theories regarding regeneration and revitalisation, he can apply the suitable preservation instruments within the designing process	[SW1] Assessment of factual knowledge
	[K7_W04] knows and understands the relationships between man and architecture and between architecture and the surrounding environment, and the need to adapt architecture to human needs and scale; problems of physics, technology and functions of buildings to the extent that ensures comfort of use and protection against the atmospheric factors; methods and means of implementing environmentally responsible sustainable design as well as protection and conservation of the surrounding environment	can define architectural and urban tools that have been used in the case of a given approach to revitalisation problems of areas and objects located on them under conservation protection	[SW2] Assessment of knowledge contained in presentation
Subject contents	The subject focuses on explaining and solving the problem of architectural revitalization problematic urban areas, among others existing down-town complexes, areas and objects in post-industrial, post-military, post-port areas, etc. It presents a range of architectural, engineering and technological activities that, while maintaining historical substance or presenting other protected values, restore the object or complex of buildings in economic and social terms.		
Prerequisites and co-requisites			
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	written exam	60.0%	100.0%
