

关。GDAŃSK UNIVERSITY 创 OF TECHNOLOGY

Subject card

Subject name and code	Ship Production Technology 2, PG_00046533								
Field of study	Ocean Engineering								
Date of commencement of studies	October 2020		Academic year of realisation of subject			2023/2024			
Education level	first-cycle studies		Subject group						
Mode of study	Part-time studies		Mode of delivery			at the university			
Year of study	4		Language of instruction			Polish			
Semester of study	8		ECTS credits			6.0			
Learning profile	general academic profile		Assessment form			assessment			
Conducting unit	Department of Ship Manufacturing Technology, Quality Systems and Materials Science -> Faculty of Mechanical Engineering and Ship Technology					ulty of			
Name and surname	Subject supervisor		dr inż. Ryszard Pyszko						
of lecturer (lecturers)	Teachers		dr inż. Ryszard Pyszko						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory Project		t	Seminar	SUM	
	Number of study hours	20.0	0.0	10.0 20.0			0.0	50	
	E-learning hours included: 0.0								
Learning activity and number of study hours	Learning activity	Participation in classes includ plan	n didactic ed in study	Participation in consultation hours		Self-study		SUM	
	Number of study hours	50		7.0		93.0		150	
Subject objectives	The aim of the course is to familiarize students: the shipyard production equipment, process to be executed on them, an explanation of the issues related to the organization of production, the requirements of the system of supervision and inspection of the ship, offshore structures, examples, ship repair problems.								
Learning outcomes	Course outcome Subject outcome Method of verification								
	[K6_W05] has an organized knowledge on design, construction and operation of ocean technology objects and systems		The student is acquainted with ocean engineering objects and systems in terms of their manufacturing technology			[SW1] Assessment of factual knowledge			
	[K6_U05] can formulate a simple engineering task and its specification within the range of design, construction and operation of ocean technology objects and systems			Large-size objects, e.g., ship hull block structures, spatial and panels			[SU5] Assessment of ability to present the results of task [SU1] Assessment of task fulfilment		
Subject contents	Technology Lectures II. First there will be a reminder in terms of the previous lectures, as well as some of the news from other subjects. Then the production processes will be discussed according to the block diagram of ship hull production. The processes will be described and explained in terms of: organization, implementation, evaluation of correctness and efficiency of their implementation. This will allow to understand the purposefulness of the processes carried out, as well as to make corrective decisions in case of discrepancies between the planned production result. Making decisions on the basis of a correct understanding of the phenomena will give confidence in obtaining a corrective effect.								
Prerequisites and co-requisites	knowledge from previous semesters and generally with welding, of Metal Science, strength of materials								
Assessment methods and criteria	Subject passing criteria		Passing threshold			Percentage of the final grade			
	Test		60.0%		60.0%				
	Project work		100.0%		20.0%				
	Laboratory		100.0%			20.0%

	eResources addresses	Adresy na platformie eNauczanie:		
Example issues/ example questions/ tasks being completed	 List the scope of work and explain how deformations of parts are produced at the machining stage proper? List the scope of work and explain how welding deformations occur at the prefabrication stage proper?3. Characterize the problems associated with the straightening of ship structures. 			
Work placement	Not applicable
