

Subject card

Subject name and code	Composite materials, PG_00060349						
Field of study	Materials Engineering						
Date of commencement of studies	October 2024		Academic year of realisation of subject			2026/2027	
Education level	first-cycle studies		Subject group			Optional subject group Subject group related to scientific research in the field of study	
Mode of study	Full-time studies		Mode of delivery			at the university	
Year of study	3		Language of instruction			Polish	
Semester of study	5		ECTS credits			1.0	
Learning profile	general academic profile		Assessment form			assessment	
Conducting unit	Division of New Functional Materials For Energy Conversion -> Institute of Nanotechnology and Materials Engineering -> Faculty of Applied Physics and Mathematics -> Wydziały Politechniki Gdańskiej						
Name and surname of lecturer (lecturers)	Subject supervisor		dr hab. inż. Beata Bochentyn				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	15.0	0.0	0.0	0.0	0.0	15
	E-learning hours included: 0.0						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	15		2.0		8.0	25
Subject objectives	The course aims to present the purpose and principles of creating composite materials, presenting various types of composites, their properties, manufacturing methods, interactions between components, and computational methods for determining the parameters of the resulting materials. Students will also learn methods for testing the structural and electrical properties of composite materials and become familiar with technological examples of composite applications in transportation and energy.						
Learning outcomes	Course outcome		Subject outcome			Method of verification	
	[K6_W03] Has knowledge of materials science and can relate the properties of materials with their structure and composition, knows the theoretical description of phenomena occurring in materials subjected to external factors.		Can explain the properties of composite materials and the interactions between components based on their structure and transport phenomena occurring in the materials.			[SW1] Assessment of factual knowledge	
	[K6_W06] Knows selected methods, techniques, tools and materials used in solving simple engineering problems within the scope of materials engineering.		Is familiar with methods for manufacturing composite materials of various geometries. He understands the impact of technological process parameters and the substrates used on the final product properties.			[SW1] Assessment of factual knowledge	

Subject contents	1. Composites - definition, classification, examples <i>Structural properties of composites - testing and characterization</i> 1. Composites of required structural properties - the most important features; methods for preparing 2. Methods of test for structural properties of composites: SEM, EDX, SPM, nanoindentation <i>Electrical properties of composites - testing and characterization</i> 1. The materials with mixed electrical conductivity (ion, proton, electron) 2. Percolation theory 3. Methods of mixed electrical conductivity testing <i>The division of composite materials, properties, manufacturing method, the interaction between the components</i> 1. Polymer matrix composites 2. Metal matrix composites 3. A ceramic matrix composites 4. Composites with carbon fibers matrix 5. Superconducting matrix composites <i>Areas of technological application of composite materials (transport, energy)</i>		
Prerequisites and co-requisites	Knowledge of basic physics.		
Assessment methods and criteria	Subject passing criteria	Passing threshold	Percentage of the final grade
	Final exam	50.0%	100.0%
