GDAŃSK UNIVERSITY OF TECHNOLOGY

Subject card

Subject name and code	APPLIED ENZYMOLOGY, PG_00063455		
Field of study	Biotechnology		
Date of commencement of studies	October 2024	Academic year of realisation of subject	2024/2025
Education level	second-cycle studies	Subject group	Obligatory subject group in the field of study Subject group related to scientific research in the field of study
Mode of study	Full-time studies	Mode of delivery	at the university
Year of study	1	Language of instruction	Polish
Semester of study	2	ECTS credits	2.0
Learning profile	general academic profile	Assessment form	assessment
Conducting unit	Department of Pharmaceutical Technology and Biochemistry -> Faculty of Chemistry		
Name and surname of lecturer (lecturers)	Subject supervisor	dr hab. inż. Iwona Gabriel	
	Teachers	dr hab. inż. Iwona Gabriel dr inż. Kamila Rząd	

Lesson types and methods of instruction

Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
Number of study hours	0.0	0.0	15.0	0.0	15.0	30

E-learning hours included: 0.0

Learning activity and number of study hours

Learning activity	Participation in didactic classes included in study plan	Participation in consultation hours	Self-study	SUM
Number of study hours	30	5.0	15.0	50

Subject objectives

Expanding knowledge in the field of ENZYMOLOGY

Learning outcomes

Course outcome	Subject outcome	Method of verification
[K7_K03] understands the social role and importance of providing reliable information and opinions to the public	The student knows the benefits of using biotechnological methods for society. The student is aware of their limitations.	[SK5] Assessment of ability to solve problems that arise in practice
[K7_U02] uses research methods used in biotechnology and related fields	The student explains the molecular basis of enzyme catalysis, inhibition and inactivation. Defines methods of physiological regulation of enzyme activity. Uses biochemical techniques such as chromatographic, electrophoretic and spectroscopic methods.	[SU4] Assessment of ability to use methods and tools [SU1] Assessment of task fulfilment [SU3] Assessment of ability to use knowledge gained from the subject
[K7_W02] explains the structure and function of biomolecules and the methods and instruments for determining their quantity and activity	The student explains the molecular basis of enzyme catalysis, inhibition and inactivation. Defines methods of physiological regulation of enzyme activity. Uses biochemical techniques such as chromatographic, electrophoretic and spectroscopic methods.	[SW1] Assessment of factual knowledge

Subject contents

As part of laboratory exercises, experimental classes are carried out covering issues related to 1) chromatographic techniques used in protein purification (Purification of beta-galactosidase from E.coli using bioaffinity chromatography) 2. electrophoretic techniques (Analysis of the effectiveness of beta-galactosidase purification using SDS -PAGE) 3. enzyme activity determination methods (trypsin and a-amylase) and 4) enzyme immobilization techniques. The seminar classes will discuss, among others: topics related to the characteristics of selected enzymes as biocatalysts, selected mechanisms of enzymatic reactions, the use of enzymes in medicine and the biotechnology industry, enzyme immobilization, clinical aspects of enzymology, basics of enzyme engineering.
