

Subject card

Subject name and code	Control Structures and Algorithms, PG_00038324						
Field of study	Automation, Robotics and Control Systems						
Date of commencement of studies	October 2024	Academic year of realisation of subject			2025/2026		
Education level	second-cycle studies	Subject group			Specialty subject group Subject group related to scientific research in the field of study		
Mode of study	Part-time studies	Mode of delivery			at the university		
Year of study	2	Language of instruction			Polish		
Semester of study	3	ECTS credits			4.0		
Learning profile	general academic profile	Assessment form			assessment		
Conducting unit	Faculty of Electrical and Control Engineering						
Name and surname of lecturer (lecturers)	Subject supervisor		dr inż. Tomasz Rutkowski				
	Teachers						
Lesson types and methods of instruction	Lesson type	Lecture	Tutorial	Laboratory	Project	Seminar	SUM
	Number of study hours	10.0	10.0	0.0	0.0	0.0	20
	E-learning hours included: 0.0						
	Adresy na platformie eNauczanie:						
Learning activity and number of study hours	Learning activity	Participation in didactic classes included in study plan		Participation in consultation hours		Self-study	SUM
	Number of study hours	20		6.0		74.0	100
Subject objectives	Acquiring a knowledge related to advanced control methods and algorithms enabling the construction of such control structures that will allow for effective control of linear/nonlinear objects, both single and multidimensional.						
Learning outcomes	Course outcome		Subject outcome		Method of verification		
	[K7_K04] is able to react in abnormal and emergency situations, health and life-threatening when use of automation and robotics components and systems						
	[K7_U10] is able to apply the known mathematical tools and methods and computer techniques to analyse and evaluate automation and robotics components, devices, systems and systems		The student can conduct the synthesis of the known advanced control algorithms for a given object specification. The student designs and implements control structures using the known advanced control methods and algorithms.		[SU5] Assessment of ability to present the results of task [SU4] Assessment of ability to use methods and tools [SU3] Assessment of ability to use knowledge gained from the subject [SU1] Assessment of task fulfilment		
[K7_W06] has an extended knowledge of the design of automation components and devices, control and decision support systems control and decision support systems and complex mechatronic systems		The student uses known (learned during the classes) methods and advanced control algorithms in the projects of control systems.		[SW1] Assessment of factual knowledge			

Subject contents	<p>Lectures</p> <p>Control structures, methods and algorithms for control and state estimation: Kalman filters (assumptions, disturbances and measurement noise, a recursive form of the estimator); predictive control algorithms DMC, QDMC, GPC (problem formulation, a model for prediction, stability, implementation aspects); linearization by feedback (input-state linearization, input-output); differential-integral calculus of fractional orders (definitions of fractional-order operators, approximations of fractional-order operators, fractional-order PID controllers); variable structure control, sliding mode control (stability of sliding motion and conditions of its existence, control law, consideration of various aspects of uncertainty, a continuous approximation of the control law); intelligent adaptive neural and object fuzzy control with nonlinear dynamics with unavailable state and uncertainty in object model dynamics.</p> <p>Laboratory exercises</p> <p>Laboratory exercises cover the practical implementation of the following topics:</p> <ul style="list-style-type: none"> • Estimation of the linear state of an object with distortions and measurement noise with a temporal structure using the Kalman Filter method, • Synthesis of follow-up manipulator control (robot arm) realizing the reference movement trajectory by linearization method by feedback with nonlinearity leakage compensation in conditions of viscous friction and additive disturbances, • Synthesis, implementation and verification of fractional-orders PID controllers for selected linear objects, • Implementation and verification of DMC and QDMC predictive control algorithms for selected single and multidimensional linear objects, • Implementation and verification of the sliding mode control algorithm enabling the stabilization of a nonlinear object with disturbances in internal dynamics. 											
Prerequisites and co-requisites												
Assessment methods and criteria	<table border="1" data-bbox="451 891 1487 1003"> <thead> <tr> <th data-bbox="451 891 794 927">Subject passing criteria</th> <th data-bbox="794 891 1137 927">Passing threshold</th> <th data-bbox="1137 891 1487 927">Percentage of the final grade</th> </tr> </thead> <tbody> <tr> <td data-bbox="451 927 794 963">Laboratory exercises</td> <td data-bbox="794 927 1137 963">50.0%</td> <td data-bbox="1137 927 1487 963">50.0%</td> </tr> <tr> <td data-bbox="451 963 794 1003">Class tests</td> <td data-bbox="794 963 1137 1003">50.0%</td> <td data-bbox="1137 963 1487 1003">50.0%</td> </tr> </tbody> </table>			Subject passing criteria	Passing threshold	Percentage of the final grade	Laboratory exercises	50.0%	50.0%	Class tests	50.0%	50.0%
Subject passing criteria	Passing threshold	Percentage of the final grade										
Laboratory exercises	50.0%	50.0%										
Class tests	50.0%	50.0%
